PARK MORE ON THE SMALLEST FOOTPRINT

RESPACE®

Our RESPACE® technology is the most space-saving automated parking solution available on the market. It is an intelligent automated parking technology that uses a sliding pallet system, similar to a child's sliding puzzle toy. Pallets can be placed very flexibly, thereby accommodating even the most challenging of footprints. Each pallet is individually controlled by the system but moved in conjunction with the surrounding pallets for higher performance and shorter waiting times. The RESPACE® system is fully EV-charging ready and particularly suited to residential and commercial buildings, where space is at a premium.

YOUR BENEFITS

- **60%** Drastic reduction in parking footprint
- Extremely flexible even in unusual layouts
- Up to 100% EV-charging possible
- Intuitive handling for a great user experience
- Protect cars from weather, theft & accidental damage

RESPACE® IS A PERFECT SOLUTION FOR NEW AND EXISTING BUILDINGS.

SEE THE RESPACE® SYSTEM IN ACTION

PARK IN WELL-LIT CABINS

The well-lit cabins, designed by your project's architect, provide a welcoming and positive experience to users.

DENSE, SAFE & FLEXIBLE

Avoid the need for ramps or walkways. The RESPACE® technology guarantees dense parking regardless of columns and shear walls.

24/7 SUPPORT

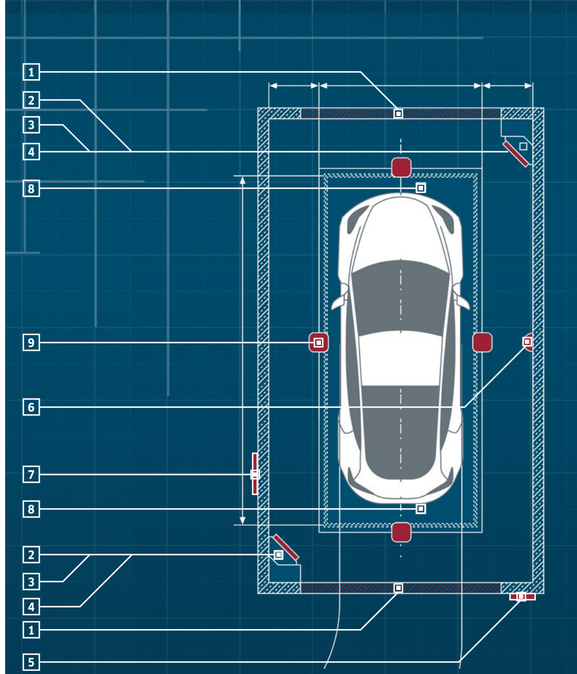
Around the clock performance monitoring and support ensures high system availability and instant troubleshooting in case of issues

EV-CHARGING READY

Equip up to 100% of spaces with EV-charging points or shuffle power supply to other cars after charging.

PEACE OF MIND

The parking system is closed to human interference and protects cars from weather, damage and theft.

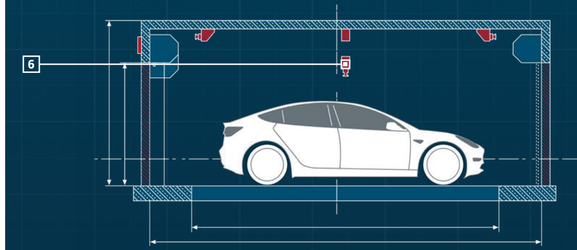


SAFETY & GUIDANCE FEATURES

1. Light barrier for walk in under door detection
2. Guidance screen
3. Camera
4. Motion and safety scanners
5. Traffic light guidance
6. Height sensor

CUSTOMER FEATURES

7. User terminal
8. EV-Charging
9. Contour & guidance scanners



SOPHISTICATED CONCEPT FOR
