Envello Board & Batten Golden Oak Timber composite cladding by Millboard

We are proposing the use of Envello Board & Batten Golden Oak Timber composite cladding by Millboard. This cladding option presents a harmonious and natural aesthetic, seamlessly integrating with the adjacent building and the surrounding forest environment. Notably, its impressive durability and resilience against rot, decay, and insect damage make it a sustainable selection, thereby diminishing the burden of long-term maintenance expenses. Furthermore, Millboard's composite cladding demonstrates its commitment to eco-friendliness by utilising recycled materials and demanding less energy in its production compared to conventional timber alternatives.
