Five Lanes Planting Schedule, Malmesbury, Wiltshire

August 2023

The Hedgerow will be planted the first planting season after commencement of construction.

Hedgerow species would be planted in staggered double rows, 0.5 metres apart forming runs of six per linear metre. They would be amalgamated into groups of five to ten of the same species to depict a more natural appearance and minimise inter-species competition for light, moisture and nutrients. Hedgerow trees would be planted at irregular intervals of approximately five to ten metres apart.

The hedgerow will be maintained for 5 years and any failures will be replaced on a like for like basis.

Length of hedgerow - 50m

Total number of shrubs and trees - 310

Hedgerow planting mix

Scientific name	Common name	Size (mm)	Guard	Type	% mix	Number
