Application Stonecrop, Horns Lane, Broad Town. SN4 7RH.

The requirement for the retaining wall is to minimise any chance of subsidence which is slowly occurring. This would also have the added benefit of levelling the front garden of the property.

It is the intention that the walling would eventually be covered with greenery (ivy/Virginia creeper) when planted and established.

Appreciated that all works would remain within the curtilage of the property and the farm track adjacent will not be encroached upon. (other than for initial works)
