Re: 3 SALISBURY HOLLOW, EDINGTON, WESTBURY, BA13 4PF : PL/2023/04258

Further Information (Design/Heritage) re. the EV Charge Point Proposal

The oldest and main part of the cottage is stone-built with a thatched roof. It probably dates from late in the seventeenth century. The lean-to kitchen extension we believe to have been added in the late nineteenth century and is solid brick (22cm). The small porch extension was added about the middle of the twentieth century and is one brick thick (10cm). All external walls are painted white. The part of the cottage that can be seen from Salisbury Hollow is the north elevation comprising the brick walls of the kitchen and porch with the old cottage gable end set back above these single storey walls. There is space for two vehicles parked facing the kitchen and porch walls. The preferred location for an EV charge point is below the porch window at about 75cm height from the drive. A single hole would need to be drilled through the single width of brickwork below the porch window. The charge point, which could be white in colour, would be approximately 20x20x10cm in size.
