Description of the garage doors that will be within the two new openings either side of the existing double garage. As they state, they will be identical to the existing set across the double garage:

2 sets of garage doors and frames W 2250mm x H 2100mm to match the photo details and the elevations provided.

Factory spray painted to match the existing mono colour (RAL or BS will be required) - I have allowed to machine the hinge cup back plates into the frame jambs before spraying but the fitting of the hinges and hinge cups will be done by others on-site - Because of the maximum leaf width specified on the Charles Collinge product sheet I've had to allow for a 90mm x 120mm finished frame to take the 67mm hinge cup back plate - In Utile hardwood.

And will be made by:
