RE: SSEN Job Ref. FAE428 – Notification of Works.

On behalf of SSEN, I would like to take this opportunity to propose the following undertaking which works are considered exempted from the Electricity Act 1989 by falling within the Overhead Lines (Exemption) (England and Wales) Regulations 2009:

Please refer to the Design Document herein where the works are stated by the annotations.

In summary, SSEN are to install an additional phase of overhead wire, along the existing route however, the supply is for the benefit and sole use of the landowner.

Please be advised that the Voltage will remain at 11kV, and this will not increase or decrease. The works are solely to alter from split-phase to three phase.

We shall also uprate the existing Pole Mounted Transformer from the existing unit to a larger capacity 200kVA unit, upon a H Pole construction.

As the works are for the benefit of the Landowner, our customer, we shall not require permissions from third parties, by way of Wayleave and/or Deed Grant of Easement.

For your consideration I have taken the liberty of attaching a screengrab to advise that aside from the AONB designation, there are no concerns that will need to be brought to the attention of further stakeholders, for example, Natural England, although the works are within a SSSI impact zone. I do not foresee this being contested or in need of further exploration.

The works are going to be scheduled for delivery, provided I do not hear back from yourselves within the coming weeks, therefore any consultation or considerations are required in writing before Monday, October 9th, 2023.

Yours Sincerely,

[redacted]
