Plan

COMPLETE
TREE MANAGEMENT

Tree No.	Spp	Works proposed	Reasons for works
T1	Ash	Reduce canopy overhanging from trees on adjacent land back to the boundary.	To contain the trees in their current setting.
T2	Ash	Fell to ground level	This tree has significant dieback in its upper canopy with a thin internal canopy. There is also the fruiting body of Inonotus hispidus on one of the main stems. As this tree's future prospects are clearly limited and the risk of failure will only proceed to get higher, it is seen as reasonable to fell the tree at this time.
T3 and T4	Ash	Reduce canopy overhanging from trees on adjacent land back to the boundary.	To contain the trees in their current setting.
