Hi Samantha

I am happy to have the description of the proposal amended to include reference to solar panels however apart from specifying that they will be on the southern pitch of the roof we have yet to agree a detailed specification for the number and size of these. Is it important that we do that at this stage??

Also, could I point out that there are some errors on the Application Form in respect of the Applicants name and address in particular Address Line 3 and the Postcode which I think my autofill settings are to blame for! I apologise for this and would be grateful if it could be corrected.

Thanks and regards

John
