Manure Management

Manure will be collected and stored in a sealed, covered trailer, to mitigate any foul run-off. It will be collected and emptied regularly by a local contractor

Practicalities have been considered when siting the trailer. Vehicular access will be required when the manure is to be collected for disposal. The trailer will need to be located conveniently for stables, but not so close as to cause horses health problems or a nuisance from flies. Importantly, the location of the trailer should be such that it does not cause a nuisance to neighbours.

No manure, bedding or waste will be burnt on site.

In the proposed location it will be a suitable distance from the neighbouring properties, and will be hidden from general view.
