Description

Oil boiler replacement, option for boiler to be fitted externally.

We will isolate and drain the system, disconnect the old boiler and flue to remove from position. Take out old boiler and dispose off.
Cut and adjust feeds in cupboard. New boiler to be fitted outside at the back, there is a water butt in place by the kitchen window, this will be removed and the base removed. Re making base with concrete slab for new boiler to sit on. Fit boiler on new base, run plume kit off flue taking the terminal up high level. Fill in vent to old boiler position. Drill out feeds through wall and run down to the boiler outside. On heating return pipe in cupboard fitting a magnetic filter to regulations and for extended guarantee.
Cut oil line low level by back door and run to boiler, fitting new fire valve in place. Run condense from boiler into down pipe with air break.
Wire in new boiler, use the programmer from in the old boiler to control the heating and hot water times. Room stat also fitted.
Commission boiler, register guarantee and register install with Oftec for building regs.
