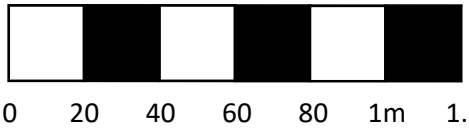
**Front Elevation** – Existing pine window to be replaced by a Heritage 47 aluminium framed window and insulated painted wood horizontal clad infill below.

Scale: 1cm to 20cm @A4



Window: 233cm wide x 138cm high

Wooden panel below: 233 wide x 90cm high

Glazing bars = 47mm wide

This window (sited on the front elevation ground floor) is not original to the building and consists of 3 poor quality pine wood casements with inner pine casements. The resulting aesthetic is busy and cluttered and offers poor security, acoustic and thermal qualities. This series of windows do not open. We intent to keep the aperture and replicate aesthetic of the adjacent window but incorporate the thermal and acoustic properties of modern double glazed aluminium windows (Heritage 47 windows from Salisbury Glass) as the building is sited directly on the A30 with significant traffic passing.
