Rear Elevation (lower) – Existing modern wooden door to be replaced by a Heritage 47 aluminium door. The existing door is pine board allowing no light into the ground floor. This is a prefabricated standard sized door, and the left side of the original aperture has been filled in with brick to compensate for the door size. We propose to remove the brick and allow the door to fill the aperture. Glazing will be used as a side light, and the door will also be glazed to maximise the light into the ground floor.

Scale: 1cm to 20cm @A4

Window Measurements: 136 wide x 192cm high

Glazing bars = 47mm wide
