3.5 Proposed North East Elevation (Back)

Notes:

[a] Slim style windows with near floor to ceiling openings to deepen the connection to the garden, providing glimpses of the ground and sky throughout the journey within the space. The language of these slim windows echoes that of the high level clerestory window [p.21] and the roof light positioned above the rear portion of the extension to tie the new windows together as part of a visual language
[b] Picture frame window looking out from the snug
[c] Bi-fold doors provide deepened connection to gardens
[d] Pigmented render to match existing stone material
[e] 400mm overhang to provide some protection to back doors from weather/elements. Creating a recess along this facade reduces the massing of the new extension design and echoes the language of the recessed stepped back walls of the existing architecture
[f] Underside roof of overhang to be lined with cedar to provide warmth to the sheltered door opening as well as echoing some of the interior timber finishes around door surrounds and the surrounding wood from existing trees that line the site
[g] Anthracite grey aluminium windows and doors used across the proposed new extension, chosen to contrast in colour to the render and allow the materiality of the new extension to have its own language as well as reference that of the existing
[h] Stone outdoor paving similar to internal kitchen floor finish to create seamless connection between internal and external space

Project Name: 21 West Ashton Road

Drawing Title: Proposed North East Elevation
