Re: Support for Planning Application PL/2024/05527
Spring Park Data Centre Campus, Westwells Road, Neston, Wiltshire, SN13 9GB

To Whom It May Concern,

I am writing to express my support for the planning application PL/2024/05527, which proposes the extension of the Spring Park data centre campus through the development of a new data centre building P6, as part of Ark Data Centres ongoing commitment to the expansion of their campus at Spring Park.

This project represents a significant investment in the local economy and digital infrastructure. As data centres are critical to supporting modern services and connectivity, I believe this development will help future-proof our region and attract further technological and economic growth.

In addition to the broader technological benefits, as a long-term supply partner to Ark Data Centres, with further investment on the Spring Park Campus will allow JCA Engineering to continue to support the local economy. Our engagement with local companies, sourcing materials and services from suppliers, and using nearby facilities such as hotels and hospitality venues, the development can deliver meaningful economic benefits to the surrounding community. These actions not only create jobs but also help sustain local businesses and foster a stronger, more resilient local economy.

I understand that some concerns have been raised regarding the visual and environmental impact of the proposed building. I am encouraged by the potential for thoughtful design solutions such as enhanced landscaping, use of natural materials, and noise/light mitigation measures, to address these concerns while still allowing the project to proceed.

I hope the council will approve this application and support the continued growth of this important facility.

Yours faithfully,
