

This business collects waste meat, bone, and fish carcasses for "recycling" this involves sorting the waste into categories that are set out by the industry. Much of the waste this company deals with is a very low quality and has little value in the recycling chain. [REDACTED]

[REDACTED] The site already has multiple large quantity of bins and containers all needing to be emptied and cleaned & disinfected along with the lorries and vehicles collecting the waste.

Will this fluid be contained or allowed to pollute the river Wylfe only a short distance away. The smell from this site is unpleasant and noticeable on occasion, and unbearable on others especially in hot weather. This could be a source of food for flies and other insects and rodents. The works have been carried out on the site over the last 12 months or so with no planning application being sought. The floor of a barn has been excavated and extensive drainage pipes have been laid away from the site towards the water table. This type of business dealing with rotting flesh and animal parts should be operated away from a water course and road where it can be controlled and contained. Rather than being sited in an ANOB unreasonably close to a chalk stream.
