Dear Adam

EIA SCOPING OPINION - UP TO 310 DWELLINGS, NURSERY SCHOOL AND STRATEGIC OPEN SPACE INCLUDING SUITABLE ALTERNATIVE NATURAL GREENSPACE (SANG)

LAND SOUTH OF HARNHAM AND WEST OF COOMBE ROAD, SALISBURY

Thank you for consulting the Environment Agency on the above screening/scoping opinion.

The following areas are considered necessary to include within the planning submission:

- Drainage
- Water Supply and Waste Water
- Sustainable Construction
- Biodiversity
- Groundwater Protection/Contaminated Land
- Pollution Prevention during Construction
- Waste

Drainage

If the site is greater than 1 hectare under National Planning Policy Framework a Flood Risk Assessment (FRA) will be required to deal with surface water runoff from the site. The surface water drainage strategy should also have consideration to pollution control measures. Further advice on the production of a FRA can be found on the .gov.uk website at: <https://www.gov.uk/flood-risk-assessment-for-planning-applications>

The consideration of surface water matters falls to the Lead Local Flood Authority and they should be consulted on surface water issues.

The site may be at risk from other sources of flooding (e.g. groundwater and overland runoff), which are not considered in the mapping of Flood Zones. Therefore you should speak to the Local Authority Technical Services or the Lead Local Flood Authority Engineers regarding this matter.

Water Supply and Wastewater

Adequate water and wastewater infrastructure is needed to support sustainable development. National Planning Policy Guidance identifies that a healthy water environment will also deliver multiple benefits, such as helping to enhance the natural

environment generally and adapting to climate change. This issue should be included and assessed in any EIA.

The [EU Water Framework Directive](#) applies to surface waters (and groundwater). It requires member states, among other things, to prevent deterioration of aquatic ecosystems and protect, enhance and restore water bodies to 'good' status.

The NPPF Planning Practice Guidance states that when drawing up wastewater treatment proposals for any development, the first presumption is to provide a system of foul drainage discharging into a public sewer to be treated at a public sewage treatment works (those provided and operated by the water and sewerage companies). This should be done in consultation with the sewerage company of the area.

Where a connection to a public foul sewer is not feasible (in terms of cost and/or practicality) a package sewage treatment plant can be considered. The package sewage treatment plant should offer treatment so that the final discharge from it meets the standards set by the required Environment Agency Environmental Permit

A proposal for a package sewage treatment plant and infrastructure should set out clearly the responsibility and means of operation and management to ensure that the permit is not likely to be infringed during the life of the plant.

Sustainable Construction

Sustainable design and construction should be implemented across the proposed development. This is important in limiting the effects of and adapting to climate change. Running costs for occupants can also be significantly reduced.

Biodiversity

The National Planning Policy Framework is clear that pursuing sustainable development includes moving from a net loss of biodiversity to achieving net gains for nature, and that a core principle for planning is that it should contribute to conserving and enhancing the natural environment and reducing pollution.

Information on biodiversity impacts and opportunities should inform all stages of development including, for instance, site selection and design including any pre-application consultation as well as the application itself.

Groundwater Protection / Contaminated Land

If historic use of the site may have caused contamination, then NPPF states that the planning system should contribute to and enhance the natural and local environment by preventing both new and existing development from contributing to, or being put at risk from unacceptable levels of water pollution. Government policy also states that planning policies and decisions should ensure that adequate site investigation information, prepared by a competent person, is presented.

Further guidance on what should be contained in the assessment and issues associated with groundwater protection can be found in our Groundwater Protection Policy document (GP3) which can be found at:

<https://www.gov.uk/government/publications/groundwater-protection-principles-and-practice-gp3>

GP3 is intended to be used by anyone interested in groundwater and in particular those wanting to undertake activities which have the potential to impact on groundwater.

Pollution Prevention during Construction

Safeguards should be implemented during the construction phase to minimise the risks of pollution from the development. Such safeguards should cover:

- the use of plant and machinery
- oils/chemicals and materials
- wheel washing and dirty water disposal
- the use and routing of plant and vehicles
- the location and form of work and storage areas and compounds
- the control and removal of spoil and wastes.

The applicant should refer to the Environment Agency's Pollution Prevention Guidelines at:

<https://www.gov.uk/government/collections/pollution-prevention-guidance-ppg>

Waste

Should this proposal be granted planning permission, then in accordance with the waste hierarchy, we wish the applicant to consider reduction, reuse and recovery of waste in preference to offsite incineration and disposal to landfill during site construction. If you require more specific guidance it is available on our website www.environment-agency.gov.uk/subjects/waste/.

NOTE TO APPLICANT

Planning Advice – Charging

Please note, we may charge for further technical input into areas of the planning process, beyond the environmental issues identified above. Our charged advice is provided through a formal agreement made up of an offer letter, a programme of advice and [standard terms and conditions](#). We will discuss the advice you need with you and agree a programme to specify the tasks that will be carried out.

The programme will also give the approximate timetable and cost for the advice. The programme can be varied by written agreement for any changes that need to be made. Charges are based on cost recovery and have been set at £115 per hour.

Please note that the view expressed in this letter is in response to a scoping opinion only and does not represent our final view in relation to any future planning application made in relation to this site. We reserve the right to change our position should new information, or updates to guidance occur, in relation to any such application.

The applicant should seek their own expert advice in relation to technical matters relevant to any planning application before submission.

Yours sincerely

Ms Lindsay Ffello
