

Dear Rhiannon

I understand that the requirement for a consolidated material applies to the first 5 metres from the edge of the carriageway. I note that there is exactly 3 metres between the edge of the carriageway and the boundary line to the property where the new vehicle access is to be created due to a very wide pavement, as shown in the image below.

Accordingly, I propose that the first 2 metres of the new vehicle access, measured from the boundary line (therefore ensuring the full 5 metre coverage of consolidated material from the edge of the carriageway) will be resin bound gravel, enclosed by a thin concrete border. The image below shows resin bound gravel in the hue I propose.

I believe the resin bound gravel (which is both consolidated and permeable (SUDS compliant)) will be complimentary to the property and overall setting, and match nicely with the 20mm golden shingle we wish to use as the top covering for the remainder of the parking area (see below). The framing of the resin bound gravel will also retain the shingle and provide a neat marker to ensure that the 5 metre coverage of consolidated material to the edge of the carriageway is maintained on an ongoing basis.

Please also see attached image of the 20mm golden shingle which I propose as the top covering of the remainder of the parking area.

LOOSE 20MM SHINGLE (PER TONNE) **[READING]**

Our loose 20mm shingle is a durable and low-maintenance aggregate, featuring golden pebbles with occasional brown and white markings for a natural, decorative finish. Ideal for driveways, pathways, rockeries, and ground cover, it also works well around water features. The 10-20mm size provides excellent drainage while helping to suppress weeds, making it a practical choice for landscaping projects.

Key Features:

- 10-20mm golden shingle supplied loose
- Natural golden pebbles with some brown and white markings
- Suitable for driveways, paths, rockeries, water features, and groundcover
- Provides good drainage and helps suppress weeds

Please do let me know if anything further is required.

Many thanks

Katie Pywell
