GOETHEGLAS

SCHOTT GOETHEGLAS reproduces the irregular surface structure of windows found in buildings from the 18th and 19th centuries. We use the historical Fourcault process to produce colorless, machine-drawn glass that remains faithful to the original esthetics and stunning period characteristics.

YOUR ADVANTAGES

- Variety of processing options available to produce laminated glass, tempered glass or insulated glass units.
- Innovative functions suit contemporary needs for thermal, solar, UV and noise control.
