

- Application Boundary
- Other Land Owned by Applicant
- Low Density (typically 30 - 35 dph)
- Medium Density (up to 35 - 40 dph)

The Density Parameter Plan outlines the gradation of density across the built development, in line with Parameter Plan, Developable Area and Land Use. It indicates density bands that are responsive to the existing and proposed surrounding uses.

To allow for variety within the development, up to 10% of any density band can be developed at the higher density of the adjacent band.

Confirmation of these densities will form part of the subsequent Reserved Matters application.
