

Design and access statement

The existing wooden partition wall and doors are not original to the building and are not fire retardant. The partition separates the kitchen area from the main hall. Fire safety requires us to provide a defined fire barrier between these two areas. We are proposing to reuse the removed walling on the new block work wall to maintain the look of the room.

The changing of this to a solid fire safe structure in no way impedes access to the room by the public.
