Check your long term flood risk

[◀ Back to select an address](#)

Flood risk summary

Your selected location: Albany House, 5, New Street, Salisbury, SP1 2PH

This information tells you the flood risk of the land around a building, not the building itself.

The highest risks of flooding at this location are from **surface water** and **rivers and the sea**.

Get flood warnings by text, phone or email

You can [sign up for free flood warnings \(https://www.gov.uk/sign-up-for-flood-warnings\)](https://www.gov.uk/sign-up-for-flood-warnings), and get messages by text, phone or email.

What surface water is

Surface water flooding is sometimes known as flash flooding. It happens when rainwater cannot drain away through normal drainage systems.

► [Why surface water flooding is a problem](#)

Rivers and the sea

[More about your rivers and sea flood risk \(/rivers-and-sea\)](#)

What makes rivers and sea flooding more likely

Low-lying areas that are close to rivers or the sea are more likely to flood when water levels rise.

This information takes into account any flood defences.

► [Why flood defences cannot completely prevent flooding](#)

Groundwater

[More about your groundwater flood risk \(/ground-water\)](#)

We use groundwater flood alert areas to check the risk of flooding from groundwater.

This location is inside a groundwater flood alert area.

You can sign up to [get groundwater flood alerts \(https://www.gov.uk/sign-up-for-flood-warnings\)](https://www.gov.uk/sign-up-for-flood-warnings).

► [What this means](#)

What groundwater is

Groundwater is the water that is usually held in rocks and soil underground.

Groundwater flooding happens when this water rises and flows above the surface.

Flooding from rivers is more likely when groundwater levels are high.

Reservoirs

[More about your reservoir flood risk \(/reservoirs\)](#)

Flooding from reservoirs is unlikely in this area.

What a reservoir is

A reservoir is a large natural or artificial lake that is designed to collect and store water.

They are usually formed by building a dam across a river, or by building a large tank or surrounding embankment. If one of these dams or embankments fails, then water could escape from the reservoir. This would result in land or properties being flooded.
