The Property

17 Woodborough Road is part of the Broadmead estate, a substantial development of semi-detached, two-storey houses interspersed with bungalows, which was constructed in Corsham between 1967 and 1975.

The property has benefited from a two-storey, 'wrap-around' extension undertaken in 2001, which maintains the character and materials of the original building. There is a pitched roof consisting of double roman, brown-coloured concrete tiles: all fascias, soffits and rainwater goods are in white upvc/pvc. The small conservatory has a poly-carbon roof, which will be removed. The walls use a cavity construction, and the external leaf is made from reconstituted stone blocks; chestnut-coloured timber panels at 1st floor. All windows and doors are constructed from white upvc.
