Dear Wiltshire Council,

Reference: TLC-STN-XX-XX-LT-AC-0001

A revised noise assessment is not required for this Section 73 application because the proposed changes relate solely to amendments to the landscape plan and do not alter any element of the development that influences noise generation or noise sensitive receptors. The original noise assessment was based on the operational characteristics, site layout, and receptor positions that remain unchanged in this variation.

As there are no new plant items, no changes to building massing, no revisions to operating hours, and no modifications to traffic flows or access arrangements, the acoustic environment assessed previously remains valid.

In addition, the proposed landscape amendments do not introduce or remove any acoustic mitigation features and therefore have no material effect on predicted noise levels or the conclusions of the original assessment.

Landscaping typically has negligible influence on environmental noise unless it involves engineered acoustic barriers, which is not the case here. As such, the previously submitted noise assessment continues to provide a robust basis for decision making, and no updated acoustic work is required for this Section 73 application.

Best regards,

Stantec UK Limited
