Dear Ms. Gazzard,

Planning consultation: Erection of a self-build dwelling with hard and soft landscaping, parking and associated works following demolition of the existing agricultural barn.

Location: Land at Elms Farm, Elms Cross, BA15 2AL

Thank you for your consultation on the above dated 28 January 2026.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

Bath & Bradford on Avon Bat SAC – Objection further information required

The application site lies within an area known to support bats that form part of the populations for which the Bath and Bradford-on-Avon Bats SAC is notified and therefore has the potential to affect its interest features. European sites are afforded protection under the Conservation of Habitats and Species Regulations 2017, as amended (the 'Habitats Regulations'). The site is located adjacent to Stoke Hill Mine which is a known hibernation site for Lesser Horseshoe bats and Greater Horseshoe bats.

In considering the European site interest, Natural England advises that you, as a competent authority under the provisions of the Habitats Regulations, should have regard for any potential impacts that a plan or project may have¹. The [Conservation objectives](#) for each European site explain how the site should be restored and/or maintained and may be helpful in assessing potential impacts.

On the basis of information provided, Natural England's advice is that this proposed development will require mitigation measures intended to avoid or reduce the likely harmful effects on a European site which cannot be taken into account when determining whether or not a plan or project is likely to have a significant effect on a site and requires an appropriate assessment (following the People Over Wind ruling by the Court of Justice of the European Union). For this reason, the proposed mitigation measures need to be formally checked and confirmed by your Authority, as the

¹ Requirements are set out within Regulations 63 and 64 of the Habitats Regulations, where a series of steps and tests are followed for plans or projects that could potentially affect a European site. The steps and tests set out within Regulations 63 and 64 are commonly referred to as the 'Habitats Regulations Assessment' process.

The Government has produced core guidance for competent authorities and developers to assist with the Habitats Regulations Assessment process. This can be found on the Defra website. <http://www.defra.gov.uk/habitats-review/implementation/process-guidance/guidance/sites/>

competent authority, via an Appropriate Assessment.

Natural England notes that a Habitats Regulations Assessment (HRA) has been produced. Natural England is a statutory consultee at the Appropriate Assessment stage of the Habitats Regulations Assessment process. The following advice is provided to support the conclusions drawn and in response to your Authority's Appropriate Assessment:

Please note that Natural England does not object to the principle of development and has the following comments:

Bat Activity & Mitigation

The site is located within the sustenance zone of juvenile Greater Horseshoe bats connected to the maternity roost located at Iford Manor SSSI, for which Greater Horseshoe bat is a SSSI feature. This site is nationally significant and contains one of the largest maternity colonies in England. The core bat habitat in the wider landscape is directly linked to the SSSI.

As no bat activity surveys have been undertaken and given the sensitivity of the landscape for bats, a precautionary approach must be taken. Given the loss of grazed pasture, it is advised that the scheme should provide additional habitat enhancement measures. This may be the planting of fruit trees, pond creation or wildflower meadow to improve the capacity of the site to provide food source for bats. Any habitat enhancement should be agreed with your Authority's ecology team and secured with any granted permission.

Lighting Strategy

While Natural England welcomes the consideration of the impacts of lighting at this stage, we would advise that any lighting strategy keeps lighting at core bat habitats to a minimum. The lighting strategy for the scheme should consider the construction and operational phases and be agreed by your Authority prior to the commencement of the scheme.

It is advised that the scheme provides a lux contour plan to demonstrate post development light spill. This plan should show that light spill from the proposed scheme on the adjacent core bat habitat will be limited to acceptable levels. Given the existing lighting, as demonstrated in the submitted Lighting Assessment for Bats, this should be no more than 0.5lux.

Any granted permission should secure a condition for a post development lighting survey to be submitted to demonstrate compliance with the submitted lighting plans, including the lux contour plan. Remedial measures should be agreed with your Authority's ecology team should post development light levels be in excess of the agreed levels.

Due to the sensitivity of this location, we would welcome a condition to ensure that no construction lighting is installed as well as no external lighting during the operational phase.

Requirement for Construction Environmental Management Plan (CEMP)

A CEMP for the scheme to avoid and mitigate effects on ecological features should be agreed by your Authority's prior to commencement of the scheme.

Should the developer wish to discuss the detail of measures to mitigate the effects described above with Natural England, we recommend that they seek advice through our [Discretionary Advice Service](#).

Should the proposal change, please consult us again.

If you have any queries relating to the advice in this letter please contact me directly.

Yours faithfully,

Kyle Conroy
Sustainable Development Higher Officer

Annex A – Additional advice

Natural England offers the following additional advice:

Wider landscapes

Paragraph 187 of the NPPF highlights the need to protect and enhance valued landscapes through the planning system. This application may present opportunities to protect and enhance locally valued landscapes, including any local landscape designations. You may want to consider whether any local landscape features or characteristics (such as ponds, woodland, or dry-stone walls) could be incorporated into the development to respond to and enhance local landscape character and distinctiveness, in line with any local landscape character assessments. Where the impacts of development are likely to be significant, a Landscape and Visual Impact Assessment should be provided with the proposal to inform decision making. We refer you to the [Guidelines for Landscape and Visual Impact Assessment \(GLVIA3\) - Landscape Institute](#) for further guidance.

Biodiversity duty

Section 40 of the [Natural Environment and Rural Communities Act 2006 \(legislation.gov.uk\)](#) places a duty on the local planning authority to conserve and enhance biodiversity as part of its decision making. We refer you to the [Complying with the biodiversity duty - GOV.UK \(www.gov.uk\)](#) for further information.

Designated nature conservation sites

Paragraphs 193-195 of the NPPF set out the principles for determining applications impacting on Sites of Special Scientific Interest (SSSI) and habitats sites (Special Areas of Conservation (SACs) and Special Protection Areas (SPAs). Both the direct and indirect impacts of the development should be considered.

A Habitats Regulations Assessment is needed where a proposal might affect a habitat site (see [Habitats regulations assessments: protecting a European site - GOV.UK \(www.gov.uk\)](#) and Natural England must be consulted on 'appropriate assessments' (see [Appropriate assessment - GOV.UK \(www.gov.uk\)](#) for more information for planning authorities).

Natural England must also be consulted where development is in or likely to affect a SSSI and provides advice on potential impacts on SSSIs either via the [SSSI Impact Risk Zones \(England\) \(arcgis.com\)](#) or as standard or bespoke consultation responses. Section 28G of the Wildlife and Countryside Act 1981 places a duty on all public bodies to take reasonable steps, consistent with the proper exercise of their functions, to further the conservation and enhancement of the features for which an SSSI has been notified ([Sites of special scientific interest: public body responsibilities - GOV.UK \(www.gov.uk\)](#)).

Protected Species

Natural England has produced [Protected species and development: advice for local planning authorities \(gov.uk\)](#) (standing advice) to help planning authorities understand the impact of particular developments on protected species.

Natural England will only provide bespoke advice on protected species where they form part of a Site of Special Scientific Interest or in exceptional circumstances. A protected species licence may be required in certain cases. We refer you to [Wildlife licences: when you need to apply - GOV.UK \(www.gov.uk\)](#) for more information.

Local sites and priority habitats and species

The local planning authority should consider the impacts of the proposed development on any local wildlife or geodiversity site, in line with paragraphs 187, 188 and 192 of the NPPF and any relevant development plan policy. There may also be opportunities to enhance local sites and improve their connectivity to help nature's recovery. Natural England does not hold locally specific information on local sites and recommends further information is obtained from appropriate bodies such as the local environmental records centre, wildlife trust, geoconservation groups or recording societies. Emerging [Local nature recovery strategies - GOV.UK \(www.gov.uk\)](#) may also provide further useful information.

Those habitats and species which are of particular importance for nature conservation are included as

'priority habitats and species' in the England Biodiversity List published under section 41 of the Natural Environment and Rural Communities Act 2006. Most priority habitats will be mapped either as Sites of Special Scientific Interest on the Magic website or as Local Wildlife Sites. We refer you to [Habitats and species of principal importance in England - GOV.UK \(www.gov.uk\)](https://www.gov.uk/guidance/habitats-and-species-of-principal-importance-in-england) for a list of priority habitats and species in England. You should consider priority habitats and species when applying your 'biodiversity duty' to your policy or decision making

Natural England does not routinely hold priority species data. Such data should be collected when impacts on priority habitats or species are considered likely.

Consideration should also be given to the potential environmental value of brownfield sites, often found in urban areas and former industrial land. We refer you to the [Brownfield Hub - Buglife](https://www.brownfieldhub.org.uk/) for more information and Natural England's [Open Mosaic Habitat \(Draft\) - data.gov.uk](https://data.gov.uk/dataset/open-mosaic-habitat-inventory) (Open Mosaic Habitat inventory), which can be used as the starting point for detailed brownfield land assessments.

Biodiversity and wider environmental gains

Development should provide net gains for biodiversity in line with the NPPF paragraphs 187(d), 192 and 193. Major development (defined in the [National Planning Policy Framework \(publishing.service.gov.uk\)](https://www.publishing.service.gov.uk/glossary) glossary) is required by law to deliver a biodiversity gain of at least 10% from 12 February 2024 and this requirement was extended to smaller scale development in Spring 2024. For nationally significant infrastructure projects (NSIPs), it is anticipated that the requirement for biodiversity net gain will be implemented from 2026.

For further information on the timetable for mandatory biodiversity net gain, we refer you to [Biodiversity Net Gain moves step closer with timetable set out - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/news/biodiversity-net-gain-moves-step-closer-with-timetable-set-out). [Biodiversity net gain - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/publications/biodiversity-net-gain-guidance) provides more information on biodiversity net gain and includes a link to the draft [Biodiversity net gain - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/publications/biodiversity-net-gain-guidance) Planning Practice Guidance.

The statutory biodiversity metric should be used to calculate biodiversity losses and gains for terrestrial and intertidal habitats and can be used to inform any development project. We refer you to [Calculate biodiversity value with the statutory biodiversity metric - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/publications/calculate-biodiversity-value-with-the-statutory-biodiversity-metric) for more information. For small development sites, [The Small Sites Metric - JP040 \(naturalengland.org.uk\)](https://naturalengland.org.uk/jp040) may be used. This is a simplified version of the statutory biodiversity metric and is designed for use where certain criteria are met.

The mitigation hierarchy as set out in paragraph 193 of the NPPF should be followed to firstly consider what existing habitats within the site can be retained or enhanced. Where on-site measures are not possible, provision off-site will need to be considered.

Where off-site delivery of biodiversity gain is proposed on a special site designated for nature (e.g. a SSSI or habitats site) prior consent or assent may be required from Natural England. More information is available on [Sites of Special Scientific Interest: managing your land](https://naturalengland.org.uk/sites-of-special-scientific-interest-managing-your-land)

Development also provides opportunities to secure wider biodiversity enhancements and environmental gains, as outlined in the NPPF (paragraphs 8, 77, 109, 125, 187, 188 and 193). Opportunities for enhancement might include incorporating features to support specific species within the design of new buildings such as swift or bat boxes or designing lighting to encourage wildlife.

[The Environmental Benefits from Nature Tool - Beta Test Version - JP038 \(naturalengland.org.uk\)](https://naturalengland.org.uk/jp038) may be used to identify opportunities to enhance wider benefits from nature and to avoid and minimise any negative impacts. It is designed to work alongside the statutory biodiversity metric.

[Natural environment - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/publications/natural-environment) provides further information on biodiversity net gain, the mitigation hierarchy and wider environmental net gain.
