Flood Risk Assessment
at
Newton Tony CE Primary School
Newton Tony, Salisbury, SP4 0HF

Flood Risk Statement

Newton Tony CE Primary School is off the main street of Newton Tony and adjacent to the River Bourne and is close to its source at Collingbourne Kingston.

The Environment Agency have produced a Risk of Flooding map for the river and the main body of the school is in Zone 3 and Zone 2.

The site of the mobile classroom is to the east of the school, as far as the scale of the map shows, it appears to be mostly outside of Zone 2.

Please see Flood Risk Assessment plan.

The levels of the site are in metres: -

School finished Floor level = 81.00

Mobile classroom Floor level = 81.50

The highest level ever recorded on the River Bourne at Idmiston Monitoring Station is 0.90m, reached on Saturday 15th Feb 2014 at 5.15pm.

Both the school and the Flood Warden for Newton Tony have stated that there is no evidence that flooding has never been experienced since the school was constructed on the site in 1958.

Ground water levels are regularly monitored by the Flood Warden, below is the latest Ground Water report for Jan 2026.
