Ref: Planning application Reference Number 14646358

Dear Alison Humphries

Thank you for helping me on the phone and the advice and hopefully these plans and photographs attached are valid and useful. They are to support a request for the installation of 9 solar panels on our detached garage. The garage has a sedum roof, and this will be removed where the panels are going to be situated. The weight of the sedum and the growing medium is equal to the weight of the proposed panels.

The panels are for this all-electric house that was built without the solar panels that were on the original plans, but as my husband is a roofer he does not want the natural slates disturbed.

The plans that are enclosed –

1. Site plan – showing the location of the garage and the house and bungalow
2. Green Leaves Existing Garage and Shed – front elevation
3. Green Leaves Existing Garage and Shed front elevation showing the panels at the maximum tilt of 9 degrees – more likely to be positioned at 4 degrees
4. Photograph 1 – location of the three houses and the garage in relation to Green Leaves and Brown leaves
5. Photograph 2 -Solar panels on the existing garage
6. Photograph 3 – existing garage without solar panels from front elevation
7. Photograph 4 – front elevation of garage – with the position of the solar panels shown at maximum possible tilt of 9 degrees more likely to be 4 degrees
8. Photograph 5 - showing the garage and have added in the hedge line that has grown up and is kept at this new height
9. Plan from the original construction – this original plan with the solar panels position shown
10. Existing garage proposal for solar panels – side elevation
11. Site survey showing location of house and three other houses and the garage

As mentioned on the digital application -there is not going to be any alteration on the highway, walls, parking or any trees.

I would like to request that the plans are returned – I am happy to pick them up – a message at tracy@barkersemail.co.uk and I will collect from reception.

Kind Regards

Tracy Barker
