Groundwater Emergence

☐

Appendix H - Risk of Flooding from

This zone is deemed as having a negligible risk from groundwater flooding due to the nature of the local geological deposits.

Flooding from groundwater is not likely.

There is a risk of flooding to subsurface assets but surface manifestation of groundwater is unlikely.

Within this zone there is a risk of groundwater flooding to surface and subsurface assets. There is the possibility of groundwater emerging at the surface locally.

Within this zone there is a risk of groundwater flooding to both surface and subsurface assets. Groundwater may emerge at significant rates and has the capacity to flow overland and/or pond within any topographic low spots.
