SMART AIR BRICKS

2 variants available

Delivery Lead Time: 10-14 Working Days

The SMART Airbrick is a highly effective flood prevention product designed to stop flood water from seeping into buildings. The perfect flood proof alternative to the standard airbrick.

- Permanently fitted flood solution
- Allows unrestricted airflow in normal conditions
- Automatic device that uses flotation valve to block passage of water under flood conditions

Details

Delivery Information

The **SMART Airbrick** has been designed as a flood proof alternative to the standard airbrick used for building ventilation.

Unlike traditional airbricks which are susceptible to water penetration during flooding, the Smart airbrick features an innovative design that activates automatically preventing water from gaining access to buildings in the event of rising flood water, while still allowing unrestricted air flow under normal conditions.

- Choose from Terrecota or Grey models
- Dimensions: 225mm x 75mm
-  Easy to install 'Fit and Forget'
- Permanently fitted and minimum maintenance required

- No mesh to restrict airflow which could cause damp and dry rot
- Tried and tested in real floods and in over 350 hours of independent tests
- Very effective
- Manufactured in the UK

Smart air bricks are invaluable as they can be fitted in advance as a permanent preventative flood solution unlike other methods of flood protection which are deployed during flooding.
