 Ownership boundary

Baseline Habitats

 w1g – Other broadleaved woodland (on-site - the south-east two thirds of this habitat have had the tree cover cleared in 2022 and 2023 (per comms.), as the poplar sp. and ash present were deemed at the end of there lives (saftey concerns and ash dieback). Therefore, the habitat now appears as woodland ground flora, young shrubs and tree saplings and seedlings (poor condition).

 w1g – Other broadleaved woodland (off-site - retained at moderate condition post-development within the ownership boundary, however excluded from the BNG metric as off-site).
