Dear Audrey Lo,

[PL/2025/00286 Galteemore Farm, Beckhampton, Marlborough, SN8 1FE](#)

Thank you for consulting the Stonehenge & Avebury World Heritage Site (WHS) Coordination Unit on this application following the applicant's provision of further information in response to our advice of 10 February 2026.

The supplementary information is welcomed and we can confirm for the Local Planning Authority our assessment that the proposal does not impact the WHS and its Attributes of Outstanding Universal Value (OUV). To allow for the assessment of impact to the WHS and its Attributes of OUV we asked for:

1. A visual demonstration of intervisibility showing the location of the site from key views due to potential intervisibility with parts of the WHS to the north and east of the proposal including Silbury Hill Scheduled Monument.

The applicant has produced a survey of intervisibility, providing photographs and assessment from the most relevant viewpoints identified in the Setting of the Stonehenge, Avebury and Associated Sites World Heritage Site Supplementary Planning Document (2025). This assessment is welcomed and demonstrates there is no intervisibility, and as a result the proposal does not present the potential for impact from visual change.

2. More information regarding the nature and amount of screening plantings.

The applicant has described and shown that, if used, screening planting would be tall grasses and that trees would not be used. Based on the low visibility, screening planting would not be required.

3. Information about lighting within and external to the polytunnel and hours of operation to monitor individual and cumulative light spill.

The applicant has confirmed there will be no internal or external artificial lighting on the site at all due to the purpose of the polytunnel. If internal or external lighting is required in the future, further consultation would be welcomed to monitor cumulative light spill within the setting of Silbury Hill.

4. A visualisation of the polytunnel demonstrating design and material.

This has been provided, and is welcomed to demonstrate the scale and material of the structure and relationship with existing structures.

We have no further comments. Please don't hesitate to get in touch if I can be of further assistance.

Yours sincerely,

Claire Selman, Partnership Manager
