G04	Mixed species	Height (m): N/A Crown Radius (m): N/A DBH (cm):N/A Life Stage: Early Mature	Mixed broadleaved woodland, dominated by ash and sycamore. Several ash exhibit symptoms of ash dieback, ranging from very minor to severe. Relatively few of the worst affected trees will strike the footpath if they fail. Prudent to walkover the site prior to commencing recommended works to identify any more severely infected trees within striking distance of a target. Squirrel damage is very frequent throughout the sycamore, with several small failed tops and branches as a consequence.	Fair	Fell circa 14 ash trees marked with pink paint. Timescale: 6 Months
G05	Mixed species	Height (m): N/A Crown Radius (m): N/A DBH (cm): N/A Life Stage: Mature	Linear strip of mature trees dominated by beech, with some sycamore and Corsican pine There is a broken, and in some place missing, fence immediately to the north suggesting the trees may belong to a third party. There is dead wood throughout most crowns and some dead standing trees, typical of trees of this maturity. Only completely dead trees and/or those which pose a risk to the footpath have been recorded individually.	Good	No action required. Timescale: No Action
