

22 Riverside Close, Laverstock.

Tree in front garden – Cherry

Tree protection fence will be positioned to ensure the tree is not damaged during construction works. The new drive will be just over 1m away from the canopy and therefore in our opinion the proposed works will not cause any negative impact on the tree.

22 Riverside Close, Laverstock.

The tree within the rear garden closet to the new patio is a Birch tree, it has a trunk dia of 0.25m and leans towards the west, a stake is still in existence to the rear of the trunk but is not currently providing any support.

To the south of the Birch tree the planting to the boundary is decorative with a lot of Ivy and Lilac bushes. A Small Yew bush is located further along as noted on the topo but is away from any existing or new development.

The proposed dwarf wall to the edge of the new patio will be 1m away from the canopy of the birch tree, and we do not feel its foundation will impact on the tree.

Tree protection fencing will be positioned to ensure both the Birch tree and Yew Bush are not harmed during Construction.

Tree in rear garden - Birch
