EXECUTIVE SUMMARY

To be read in conjunction with full report.

Site	- Irregular in shape comprising one large area given over almost entirely to arable use with some fallow ground in the north west corner of the northern field. Wild deer noted. - Track access into site from Storridge Road in south west corner. - Site backs onto rear gardens along south west and south east boundaries. - Drainage ditches run just outside north west and north east site boundaries and collect to north west corner of north field where there is standing water, but no positive outfall visible. Ground in this area of north field is boggy. - Ground levels fall from the southern corner in a north westerly direction, initially at 1 in 60, but 1 in 12 over much of the central area of the site. - A sewage pumping station projects into the site from the south east boundary. - Raised manhole covers reflect sewer systems that cross the site to and from the sewage pumping station. - Raised water trough close to the centre of the site with water supply now disconnected. - Minor fly tipping and site of small bonfire noted behind No.42a The Ham.
Historical Maps	- Westbury Iron works formerly to the south but no longer recorded from 1960. - Extensive quarrying activities in conjunction with Iron Works date back at least to 1887. - Subsequent filling operations to these quarry areas. - References to Site of British settlement and Roman remains to the east. - Small sewage works recorded immediately adjacent to south west boundary from 1938 but has disappeared by 1995. - Reference to Old Quarry very close to the site in 1887 does not correlate with any physical features within the site other than a track at that time. - Small filter bed and sludge tank facility recorded extending into the centre of the site from Hawkeridge Park from 1972 but has disappeared by 1995 and area replaced by pumping station by 2016. - Small pond recorded within northern area.

Geology and Hydrogeology	- Mapping indicates the site is free of Superficial Deposits and immediately underlain by mudstone, sandstone, ironstone and limestone, likely to be weathered at surface. - Bedrock Aquifer designation given as Secondary Aquifer-A. - Site is not located within a Source Protection Zone.
Hydrology and Flooding	- Site located in an area of EA Flood Zone 1. - Nearest main river is Biss Brook flowing northerly 550m to the west with a tributary recorded 250m to the north west. - Reference should be made to the separate Flood Risk Assessment.
Mining and Extraction	- Site not at risk from coal mining. - Extensive historic extraction activities close by to the south, south east and east.
Waste and Landfill Sites	- Extensive recorded and unrecorded filling operations to former quarry areas to the south east, east and north east with the nearest to the south east located within 250m of the site.
Contaminated Land Risk	- No contaminated land entries held relating to the site but sources of risk identified associated with adjacent sewage works, filter beds and sludge tanks, small pond and possible old quarry (**predating map?**).
Hazardous Ground Gases	- Potential sources identified associated with adjacent landfill activities. - Potential sources of risk also associated with historic activities onsite. - Site affected by radon and basic measures required.
Site Investigation	- General ground conditions to be investigated for geotechnical and environmental purposes. - First stage trial pit investigation recommended to provide general site coverage. - Area of former filter beds and sludge tank, pond and boundary with area of former sewage works to be investigated. - Scope of second stage borehole investigation with gas monitoring provision to then be firmed up.
Surface Water Infiltration	- Ground conditions unlikely to be suitable for infiltration based drainage.
Invasive Plants	- None noted during site inspection, but specialist assessment required.

1.0 INTRODUCTION

1.1 Appointment

1.1.1 In May 2016, Lees Roxburgh Limited were commissioned by Gladman Developments to carry out a Phase 1 Geoenvironmental Assessment on an area of land off Storridge Road, Westbury, Wiltshire.

The Geoenvironmental Assessment covers a Phase 1 Desk Study.

1.2 Proposed Development

1.2.1 A residential housing development is proposed.

1.3 Objectives

1.3.1 The objectives of the Phase 1 Geoenvironmental Assessment of the site are summarised as follows;

- Determine the historical and environmental setting of the site.
- Determine the geology, hydrogeology and hydrology of the area of the site.
- Advise on anticipated ground conditions.
- Identify potential environmental hazards to the development.
- Prepare a preliminary risk assessment where potential hazards to the development have been identified.
- Set out proposals for physical site investigation works (Phase 2 Geoenvironmental Assessment).

1.4 Scope of Work

1.4.1 The Phase 1 Desk Study element of the work has been based on reference to, and must be read in conjunction with, the following;

- Site walkover
- Landmark Envirocheck Report – **Appendix 2A**
- Wiltshire Council Environmental Health Report – **Appendix 2B**

1.4.2 This report describes the findings of the assessment work and provides recommendations in respect of site investigation works.

1.4.3 Lees Roxburgh Limited, having exercised reasonable skill, care and diligence in preparing this report, shall not be held liable for any loss arising from erroneous information received from third parties.

1.4.4 This report has been prepared specifically for Gladman Developments and their advisors and reliance on its contents cannot be placed by any third party without the express permission of Lees Roxburgh.

2.0 SITE LOCATION AND DESCRIPTION

2.1 Location

2.1.1 The site is centred on National Grid references 386100, 152580 and is approximately 9.92 hectares in area. **(Appendix 1A).**

2.1.2 The site is situated on the north west outskirts of Westbury some 5km to the south of Trowbridge town centre.

2.2 Surrounding Land Use and Access

2.2.1 Access to the site is currently at the western corner via a bellmouth entrance from Storridge Road, where a farm gate and 50m long track leads into the main body of the site.

2.2.2 Storridge Road runs from north west to south east. The rear gardens to a line of residential properties fronting onto the road predominantly form the south west boundary to the site.

On the opposite side of Storridge Road there are industrial estates and a sewage treatment works, with the land falling away to the south west to Biss Brook, flowing in a northerly direction, some 600m distant.

2.2.3 Residential properties line the south east boundary of the site, built around the B3097 The Ham road, with a railway line and Westbury North Junction 250m away. Further to the south east there are a number of large lakes and a second railway line, beyond which lies the main conurbation area of Westbury approximately 1km away.

The line of the south east boundary is interrupted by a small Wessex Water pumping station that projects 40m into the site.

2.2.4 To the east of the site there is a large sewage treatment plant and the Lafarge Cement Works located 800m and 2.3km away respectively.

2.2.5 Immediately to the north east there are open fields around Glenmore Farm, with an extensive area of farmland and sporadic farmsteads set either side of the A350 and the small village of Heywood some 1.3km away. One of the immediately adjacent fields is used for horse pasture.

Bithan Brook flows in a north westerly direction approximately 800m away.

2.2.6 Along the north west boundary of the site there is a narrow wooded area for much of the length, beyond which lies the extensive West Wiltshire Trading Estate and then an expanse of open farmland either side of Biss Brook.

2.3 Site Description

2.3.1 The site is irregular in shape and comprises one large arable field, most of which was set to a crop of wheat at the time of the site inspection. The north west corner was fallow with some boggy ground.

2.3.2 A number of raised manhole covers are visible, reflecting Wessex Water sewers.

2.3.3 There is a metal water trough set on brick walls close to the centre of the site. This is now redundant and the water supply is disconnected.

2.3.4 The dog-legged north west and north east boundaries are generally post and wire fencing reinforced with trees and bushes. There is a shallow ditch system, largely dry at the time of the site inspection, running just outside and parallel with these boundary lines.

2.3.5 There is post and wire security fencing around the pumping station compound that projects into the south east boundary of the site

2.3.6 The remaining boundaries to housing areas are a mixture of hedges, post and wire and garden fencing, with occasional brick/block walling.

2.3.7 There were deer in the field at the time of the site inspection.

2.3.8 Minor fly tipping, mainly garden waste, was noted behind the rear garden to No.42a The Ham, where a small bonfire site was also evident.

2.3.9 There was no obvious visual evidence of ground contamination.

2.4 Topography

2.4.1 There is a general fall across the site in a north westerly direction, varying between 1 in 60 in the southern corner and 1 in 12 over much of the central area of the site.

2.4.2 Reference should be made to the topographical survey but falls can be summarised as follows;

- Level at southern corner… 69.0m AOD
- Level along the north west boundary… 52.0 - 52.5m AOD

2.5 Existing Drainage

2.5.1 As previously mentioned, ditch systems are present just beyond the north west and north east boundaries. Both systems appear to collect to a low point on the north west boundary. The ditches were largely dry at the time of the site inspection, with the following exceptions:

- On the north west boundary, directly opposite the pumping station, a 150mm pipe discharges into the ditch. This had a slight flow at the time of the site inspection, and the flow was consistent with the flow passing through two upstream manholes within the site. (Reference **Appendix 1B**).
- At the low point of the north west boundary there was water standing, possibly an ephemeral pond, and reed vegetation. It was not possible to identify any positive surface water outfall to the north as the area was heavily overgrown on both sides of the boundary line.

- There is a 150mm pipe discharge into the ditch, probably a land drain, just beyond the northern corner of the site, with water standing at the junction of the ditches at the northern corner. The ditch appears to fall towards the low point on the north west boundary, but was dry for much of its length at the time of the site inspection.

2.5.2 The manholes evident within the site are largely consistent with Wessex Water adopted sewer assets.

In addition, there is a 225mm diameter surface water outfall that emerges from the housing estate behind No.33 Hawkeridge Park to connect into the north west ditch system (as noted in 2.5.1 above) via the adopted sewer system.

2.5.3 The Wessex Water sewer records identify a number of drainage and other utility systems that are not visible on site.

- A 225mm rising main enters the site beneath the access track at the south west corner, crossing the site and then wrapping around the pumping station compound on the south east boundary. A second 200mm diameter rising main emerges from the pumping station compound and the two rising mains then run side by side and parallel with the south east boundary to leave the site at the eastern corner.

- The sewer records have a warning remark that there is a buried high voltage electricity cable that lies very close to the line of the 250mm rising main as it crosses the site.

- A private rising main is indicated running from the West Wiltshire Trading Estate, crossing the north west boundary close to the 150mm surface water outfall into the ditch, and rising to the pumping station on the south east boundary.

- A water main is also indicated running parallel with the private rising main.

Separate reference should be made to these records and indeed all other services plans.

3.0 HISTORICAL, GEOLOGICAL AND ENVIRONMENTAL SETTING

3.1 Sources of Information

3.1.1 Reference has been made to the Landmark Envirocheck report dated 10th May 2016 **(Appendix 2A)**.

3.1.2 Reference has also been made to the Coal Authority and Wiltshire Council **(Appendix 2B).**

3.2 Historical Maps

3.2.1 The Envirocheck report provides mapping dating back to 1887.

3.2.2

Map Dates	Surrounding Area	Site
1887 to 1904	In an area of general open farmland but with the *Western Railway* (*Wilts*, *Somerset* and *Weymouth Branch*) 300m to the south east. *Westbury Iron Works* to the south with extensive buildings and railway infrastructure including *Coke Ovens* and *Gasometer*. Also associated are 2 No. references to *Quarry* either side of the railway. *Westbury Station* adjacent to the iron works. Just to the north of the ironworks is reference to *British Settlement* (*Site of*). *Westbury* 1.3km to the south east. *Moat* 300m to the north west. *Biss Brook* 600m to the west. Buildings identified as *The Ham* 100m to the south. By 1901, additional section of railway runs to the east with reference to another *Quarry* 400m to the east of the site and a *Tramway* link from the iron works. Reference to *Old Quarry* also appears 500m to the south east. Sporadic small ponds in the area.	Site abuts unnamed road but which becomes *Station Road* to the south east. Comprises a field to the north with boundaries clearly defined but to the remainder of the site boundaries are not defined forming part of a much larger field. Track extends into site with reference to *Old Quarry* but with no evidence of workings. Other than the track and the internal field boundary, no features identified. By 1901, linear feature (mound?) identified extending into the site along the line of the track with an apparent link to the quarry beyond the lane to the south east. Reference to old quarry has disappeared. Small unidentified rectangular feature appears in northern field. Internal field boundaries appear within the south west area.
1924 to 1926	*Ham Road* just to the south east. Road to the south west remains unnamed. Large buildings with reference to *Tank*, *Filter Bed* and *Reservoir* appear to the opposite of this road abutting the iron works. Additional buildings within iron works.	An Internal field boundary has disappeared. Otherwise, no evident change.

	Some properties now front onto this road. Reference to *Romano-British Settlement* (*Site of*) now to the south east.	
1936 to 1941	Road to south west now identified as *Storridge Road* with development now fronting onto this road and Ham Road forming southern boundaries of site. *Cheese Factory* identified to the opposite side of the road. Now *New Westbury Iron Works*. Increased development within Westbury extends towards the site. *Sewage Works* (*Westbury UD Council*) appears 550m to the east. *Storridge Sewage Works* (*Warminster and Westbury RD Council*) with *Filter Bed* and Tank appears immediately next to the site boundary as it extends up to Storridge Road. Additional railway line appears 650m to the south east.	Internal boundaries appear within southern corner. Otherwise no evident change.
1947 (aerial)	Numerous buildings appear just to the north west with associated access roads. Infrastructure associated with iron works appears to have disappeared.	No detail but apparent buildings within south east area.
1960 to 1961	Iron works have disappeared. Reference to *Roman Remains found* to the east. Extensive buildings to the north west identified merely as *Depot*. Reference to *Works* in location of sewage works immediately adjacent to the site. Ongoing development within Westbury reflected.	Internal boundaries only identified with no buildings shown.
1972 to 1974	*West Wilts Trading Estate* with references to *Warehouse*, *Works* and *Poultry Houses* to the north west. *Sewage Farm* 50m to the south west. Buildings to the south identified as *Depot*. Buildings appear on site of former iron works with references to *Depot* and *Store*. Water bodies including reference to *Lake* appear beyond the railway. Development off *Hawkeridge Park* now infills gap between east boundary and what is now The Ham. Reference to *Depot* and *Civil Engineering Depot* on site of former iron works with *Poultry Houses* to the north.	*Filter Bed* and *Sludge Tanks* extend from Hawkeridge Park into the site. Continued reference to sewage works immediately to the west. Internal field boundaries within southern corner have disappeared. Small feature in northern area now identified as *Pond* with trees.

	Milk Processing Factory now identified to the opposite side of the road to the south west. Large *Warehouse* appears within this area 200m to the north west. Additional water bodies of varying sizes extend north easterly.	
1977 to 1989	Development within trading estate extends down to the north west corner of the site off *Broadway East*. Large building (site of former warehouse) within the estate closest to the site identified as *West Wilts Craft Centre*.	Appears unchanged. Location reference *The Ham* appears on the site.
1995 to 2000 inc. 1999 aerial	Detail more clearly identified including water bodies and watercourses including Biss Brook. Reference to sewage works immediately adjacent to the west boundary of the site has disappeared and area now occupied by a property.	Reference to filter bed and sludge tanks has disappeared. Pond remains recorded and appears to extend over a larger area. Only internal field boundary now remains delineating the northern field.
2006 to 2016	Development within Westbury now extends up to the furthermost railway line from the site. *Factory* with associated infrastructure including access off Storridge Road appears 300m to the south west. Ref. 2.0.	Internal field boundary and small pond remain but have disappeared by 2016. Ref. 2.0.

3.3 Site Geology and Hydrogeology

3.3.1 Reference to geological mapping identifies the site as being free of Superficial Deposits.

The site is recorded as being immediately underlain by mudstone, sandstone, ironstone and limestone, likely to be weathered at surface.

3.3.2 Soils are classified as of Intermediate Leaching Potential.

3.3.3 Bedrock Aquifer designation is given as Secondary Aquifer-A and Unproductive Strata.

3.3.4 The site is not located within a Source Protection Zone.

3.4 Estimated Soil Chemistry

3.4.1 Estimated background concentrations for the following metals have been provided;

- Arsenic 15-25mg/kg
- Cadmium < 1.8mg/kg
- Chromium 60-120mg/kg

- Lead < 100mg/kg
- Nickel 15-30mg/kg

3.4.2 These background levels are not considered as presenting a source of risk to the development.

3.5 Hydrology and Flooding

3.5.1 The nearest recorded water system is a non-main river to the north west of West Wilts Craft Centre. This is a tributary of Biss Brook, a main river which flows northerly 550m to the west.

There are no systems recorded on or within the immediate vicinity of the site.

3.5.2 Reference to the Environment Agency's flood mapping identifies the site as being located within a Zone 1 area of flood risk with areas of flood risk Zone 2/3 to the north west, 400m at the closest, and further away to the north east.

3.5.3 Reference should be made to the separate Flood Risk Assessment in this regard.

3.6 Discharge Consents

3.6.1 There is 1 No. discharge consent onsite and this relates to the Wessex Water pumping station abutting the south east boundary and noted as discharging to a tributary of Biss Brook. This was revoked on 17th December 2008.

3.6.2 A discharge consent immediately adjacent to the site is located to 44 The Ham and related to treated effluent to a soakaway dated 23rd October 2001.

3.7 Pollution Incidents to Controlled Waters

3.7.1 There are no incidents recorded within 1km of the site.

3.8 Mining and Extraction

3.8.1 Reference to the Coal Authority confirms the site is not at risk from coal mining activities.

3.8.2 Reference to historic OS mapping has identified extensive extraction activities to the south, south east and east substantially associated with the former Westbury Iron Works.

3.9 Waste and Landfill Sites

3.9.1 Landfill sites are identified less than 100m to the south east (deposited waste included inert waste, last input 31st December 1984), 300m to the north east (former railway cutting, deposited waste included inert, industrial, commercial and household waste, last input date 17th October 1985) and 500m to the east at Slag Lane (types of waste not supplied, closed 31st December 1998).

3.9.2 Additionally extensive areas of potentially infilled land are identified to the south, south east and east.

3.10 Contaminated Land Entries

3.10.1 Wiltshire Council have not identified any contaminated land entries with respect to the site but have confirmed the historic landfill activities nearby.

3.11 Contemporary Trade Directory and Fuel Station Entries

3.11.1 There are 44 No. recorded Contemporary Trade Directory Entries within 250m of the site details of which can be found in **Appendix 3A**.

None of these is deemed relevant to the development of this site.

3.11.2 There are no Fuel Station entries within 250m of the site.

3.12 Hazardous Ground Gas

3.12.1 Extensive waste and landfill activities have been identified in the area associated with former mineral workings and could present a source of gas risk which needs to be investigated.

3.12.2 Reference to *BRE Radon – Guidance on Protective Measures for New Buildings* identifies that the site does lie in an area which is at risk from radon and basic protection measures are required.

3.12.3 On this basis, the risk to the development related to landfill gas and radon needs to be considered.

3.13 Previous Investigation Data

3.13.1 No available investigation data for the site has been identified.

4.0 PRELIMINARY RISK ASSESSMENT

4.1 Potential Sources of Contamination

4.1.1 From a review of the Desk Study stage of the work sources of potential environmental risk have been identified associated with;

- Former sewage works immediately abutting the south west boundary.
- Filter bed and sludge tanks within the central area of the site.
- Small pond within the north area of the site.
- Evidence of workings and reference to Old Quarry within the southern area of the site, although there are no features recorded which correlate to this description.
- Adjacent landfills.
- Radon.

Sections 4.1, 4.2 and 4.3 set out the general potential issues which can impact on a site of this nature. Section 4.4 addresses this specific site.

4.1.2 Any potential contaminants are likely to be entrained within the made ground and could potentially relate to the following determinands;

- Elements which could pose a risk to human health and/or controlled water - arsenic, cadmium, chromium VI, lead, mercury, nickel, nitrogen, selenium.
- Potentially phytotoxic elements - copper, zinc.
- Inorganic chemicals which could pose a risk to human health controlled water and/or buildings - cyanide, soluble nitrate, sulphate, sulphur.
- Other inorganic contamination - asbestos, pH conditions.
- Organic contaminants, which could pose a risk to human health and/or controlled water - polyaromatic hydrocarbons (PAH) and total petroleum hydrocarbons (TPH), polychlorinated biphenols (PCB), solvents/ SVOCs.

4.2 Potential Receptors

4.2.1 There are a number of receptors that could be affected by potential onsite sources of contamination, associated with development of a site. These are;

- Groundwater
- Surface Water
- Development workers exposed during groundworks

- Adjacent site users during development works, possibly exposed to soil particles
- Future end users exposed to soil in garden/landscaped areas
- Plants exposed to phytotoxic substances in soil or groundwater
- Buildings exposed to aggressive ground conditions.

4.3 Potential Pathways

4.3.1 The risk assessment adopted is based on the Source-Pathway-Receptor (SPR) approach where the Source comprises the potential contaminant, the Receptor is a target which may be adversely affected by the Source and the Pathway, the means by which the contaminant may move from the Source to the Receptor.

4.3.2 There are a number of potential pathways for sources of contamination to reach sensitive receptors, including direct contact with the soil, air-borne vapours, dust and groundwater.

Contaminants in the soil may also generate leachate, which could potentially reach the aquifer and/or surface water bodies.

4.4 Pollutant Linkages

4.4.1 The following table, which represents a site-specific Conceptual Environmental Risk Model (CERM), provides a summary of potential pollution linkages and risks that could be associated with the site, in relation to the proposed residential development.

Source	Pathway	Receptor	Potential Pollution Linkage	Comment
Made Ground: Contaminants Entrained within soil at the site (e.g. toxic/ phytotoxic elements, Extreme pH Conditions hydrocarbons), PCB, SVOC etc.	Skin contact/ ingestion/ inhalation	Construction workers	**Potentially Active** - Low to Medium Risk	Potential sources identified in 4.1.1.
	Skin contact/ ingestion/ inhalation	Site end users	**Potentially Active** - Low to Medium Risk	Potential sources identified in 4.1.1.
	Ingestion/ inhalation	Adjacent land users	**Potentially Active** - Low to Medium Risk	Potential sources identified in 4.1.1.
	Direct contact /dissolved	Structure.	**Potentially Active** - Low to Medium Risk	Potential sources identified in 4.1.1.
	Roots within contaminated soils	Plant growth	**Potentially Active** - Low to Medium Risk	No evidence of poor plant growth was observed during the site inspection.

Mobile Contaminants (i.e. leachates, hydrocarbons) within the ground	Leaching into groundwater	Groundwater	**Potentially Active** - Low to Medium Risk	Potential sources as identified in 4.1.1. Underlain by a Secondary Aquifer.
	As above; with flow through permeable soils	Abstractions	**Inactive**	Potential sources identified in 4.1.1. The site is not within a Source Protection Zone.
	Migration through Soil	Surface water	**Potentially Active** - Low to Medium Risk	Potential sources identified in 4.1.1. Watercourse system located along boundary of site.
Landfill Gas	Emission from the ground	Construction workers	**Active** - Low to Medium Risk	Potential sources identified associated with extensive activities to the south, south east and east.
	As above penetrating buildings	Site end users	**Active** - Low to Medium Risk	
Radon	Emissions from the ground	Construction workers	**Active** – Low risk	The site is within a radon risk area and basic radon protection required.
	As above; Penetrating buildings	Site end users		
Hazardous Ground Gasses; originating from organic degradable soils or volatile hydrocarbons	Emission from the ground	Construction workers	**Potentially Active** - Low to Medium Risk	Potential sources as identified in 4.1.1.
	As above; penetrating unprotected buildings	Site end users	**Potentially Active** - Low to Medium Risk	

4.4.2 In summary, it is considered from review of the source material and the existing setting of the site that any risk of contamination can be considered overall to be low to medium with some risk from external sources and at this stage the property would not be considered to be designated as “contaminated land” under Part IIA of the Environmental Protection Act 1990. However, physical site investigation works are recommended and covered under Section 5.0.

5.0 COMMENT AND RECOMMENDATIONS

5.1 Site Investigation

5.1.1 A Phase 2 Geoenvironmental Assessment (Site Investigation) will be required at the appropriate stage.

5.1.2 A first stage trial pit investigation is recommended as providing the best means of identifying trench stability for construction purposes and is less susceptible to conclusions on the nature of the underlying ground conditions being distorted by local variations

The scope for the further investigation by borehole can then be firmed up and should include for gas monitoring provision.

5.1.3 Attention is drawn to the drainage systems and services identified on the site.

5.2 Potential Foundation Requirements and Environmental Issues

5.2.1 Based on this desk study, ground conditions may well prove favourable for traditional strip foundations.

However, detailed foundation requirements can only be confirmed once physical site investigation works have been undertaken and soil conditions identified and assessed.

5.2.2 Potential sources of contaminative risk have been identified all as set out in section 4.1.1.

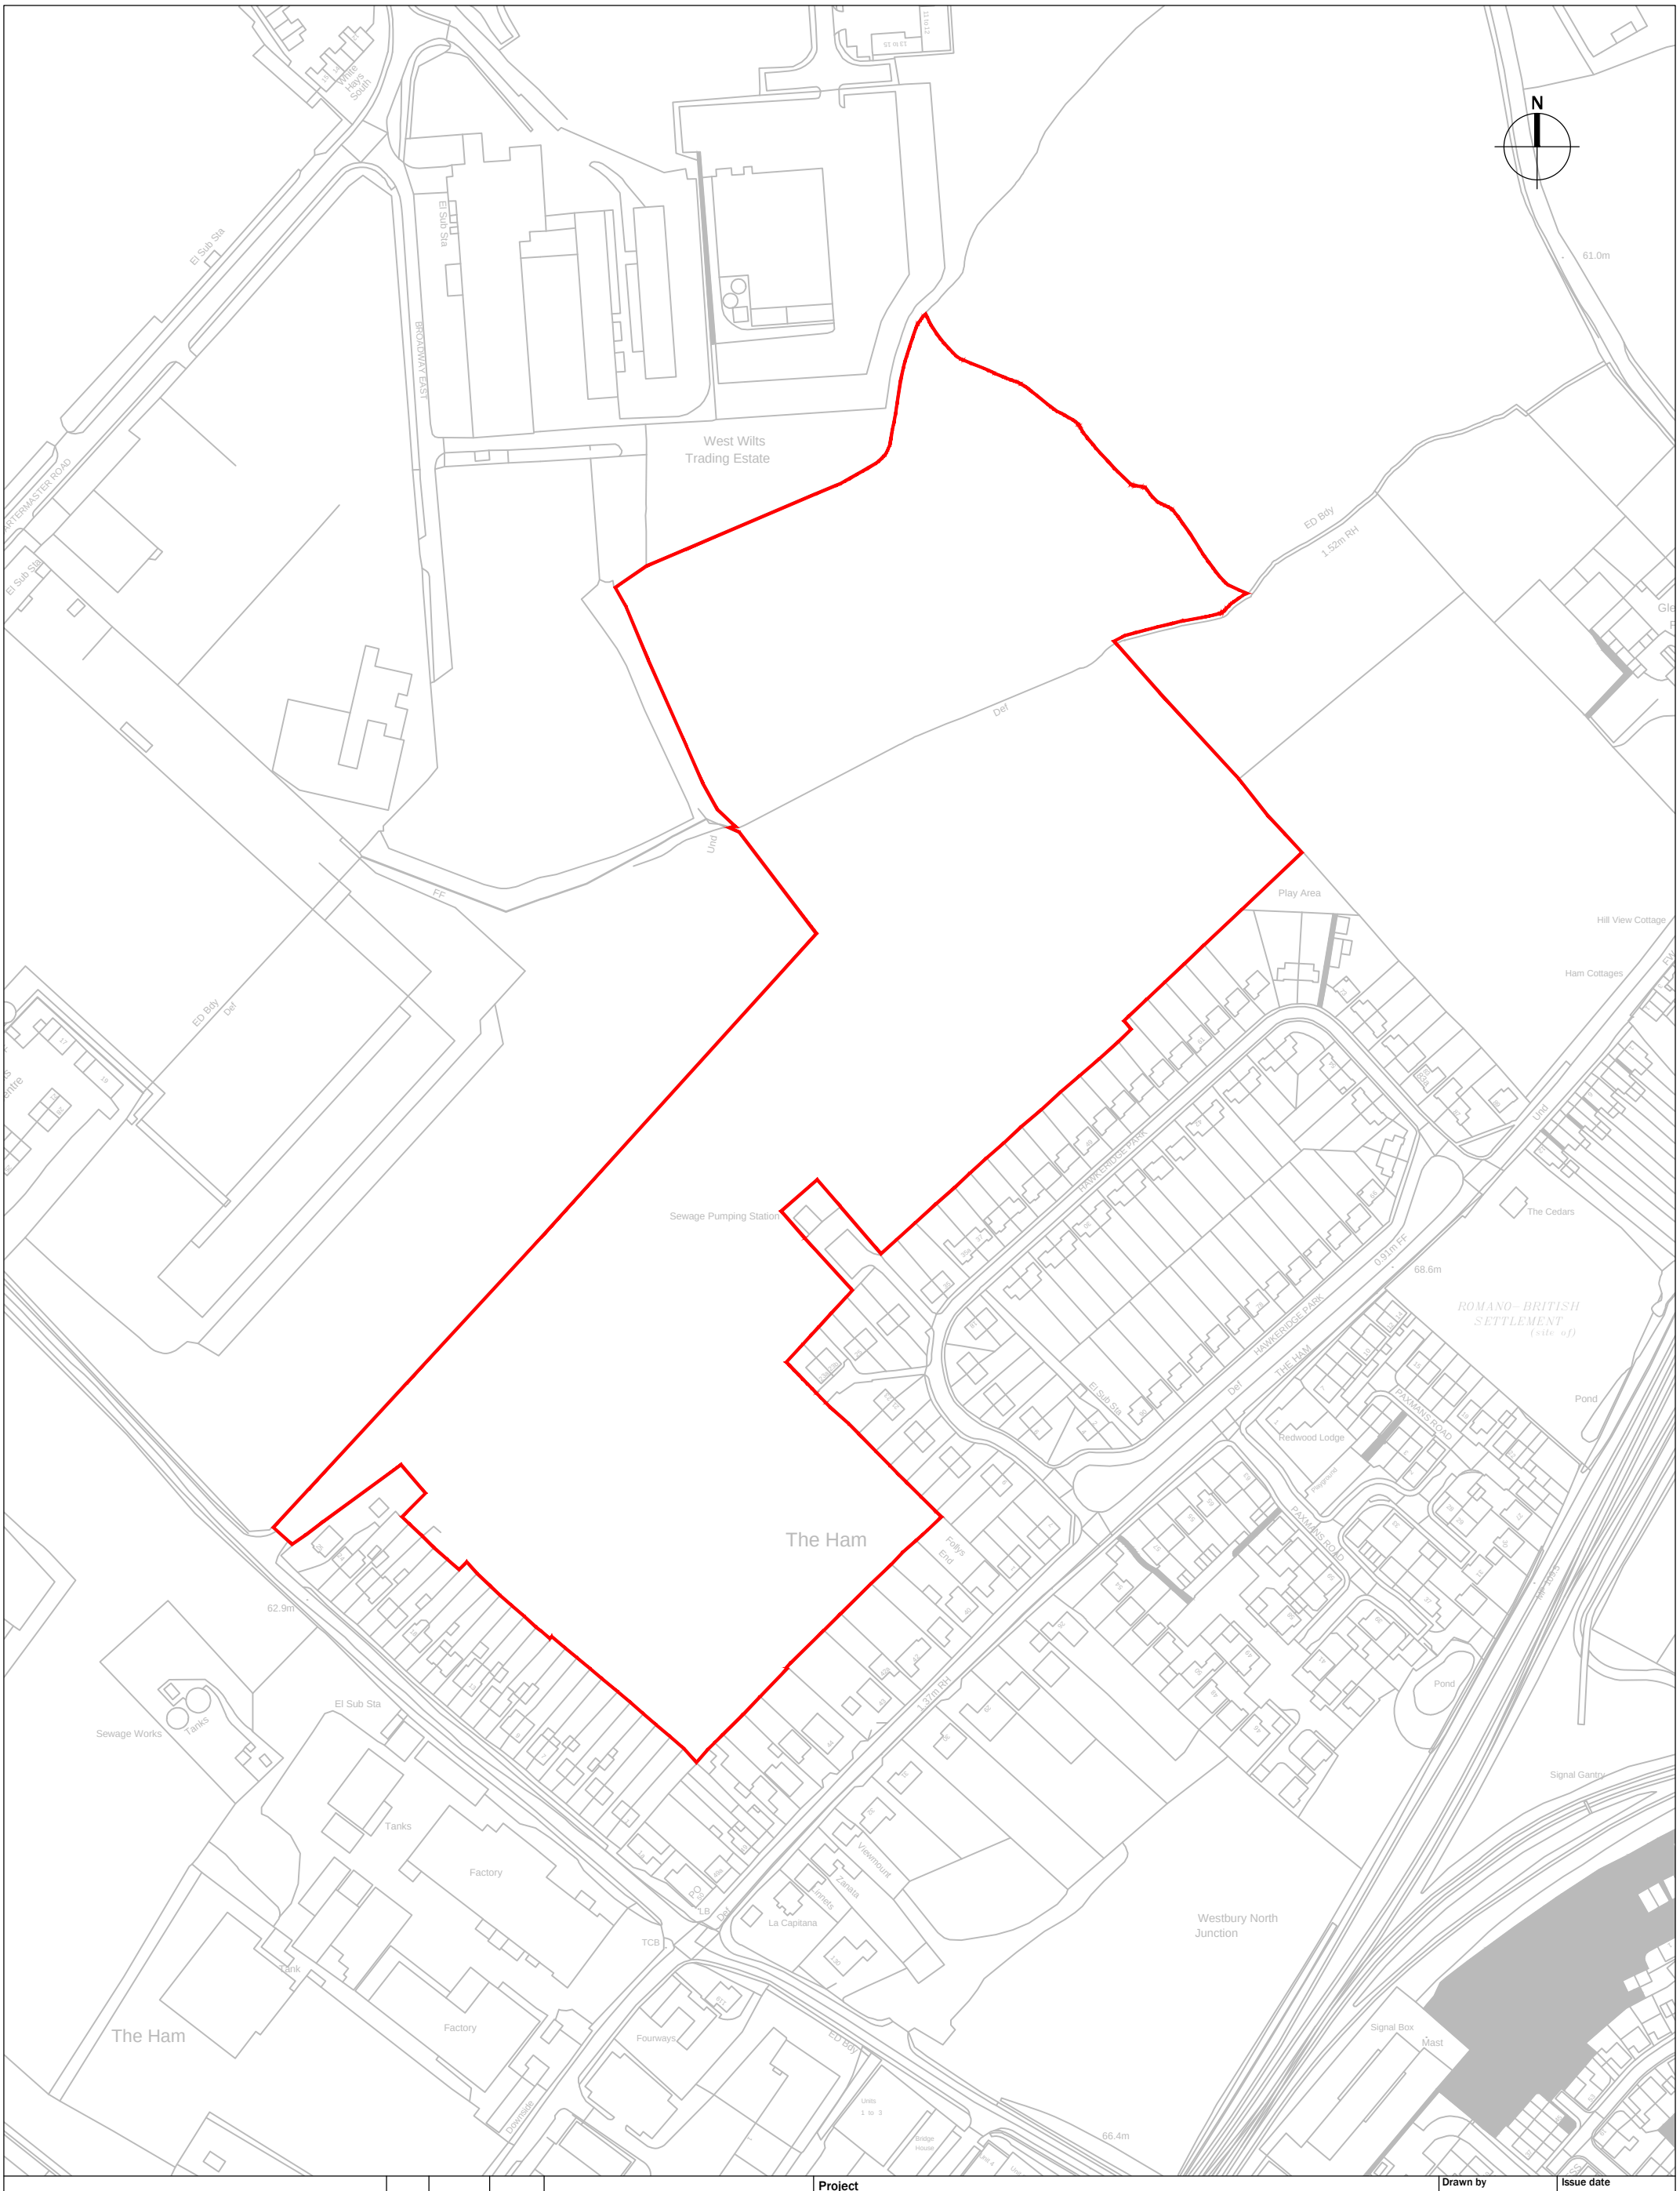

Such risks and their implications on the development can only be confirmed once physical site investigation works have been undertaken and ground conditions sampled and assessed, supplemented by testing as necessary together with gas monitoring.

5.3 Infiltration Based Drainage

5.3.1 On the basis of this desk study, it is considered that ground conditions are unlikely to be suitable for infiltration based drainage.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Map data

British Geological Survey
NATURAL ENVIRONMENT RESEARCH COUNCIL

Environment Agency

NATURAL ENGLAND

Envirocheck reports are compiled from 136 different sources of data.

Published 1890

Source map scale - 1:10,560

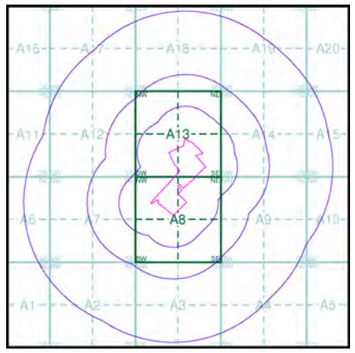

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

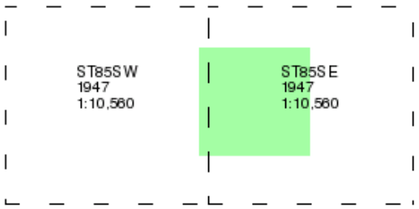

Published 1947

Source map scale - 1:10,560

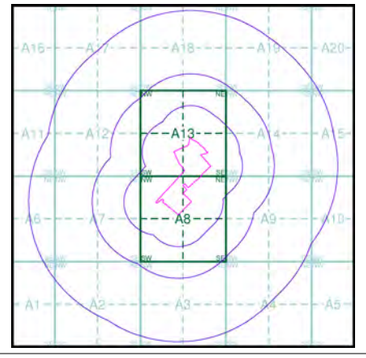

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

10k Raster Mapping

Published 1999 - 2000

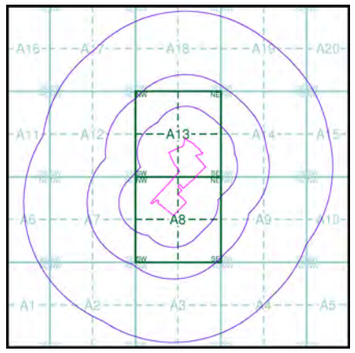

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2016

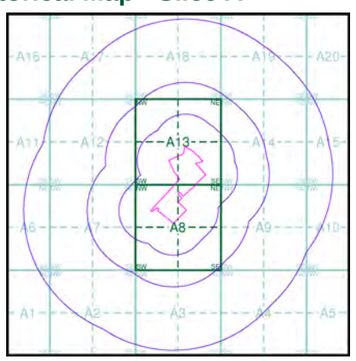

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Wiltshire

Published 1887

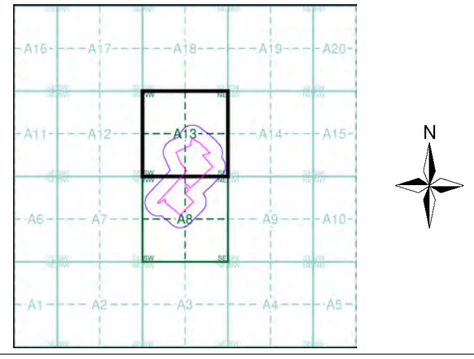

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1995

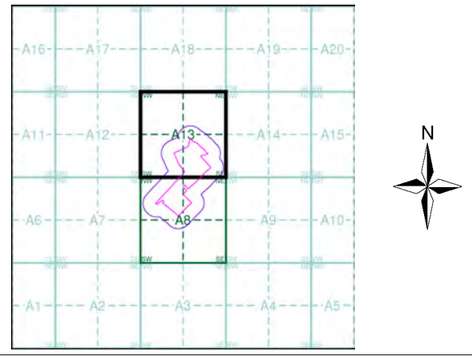

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan

Published 1974 - 1987

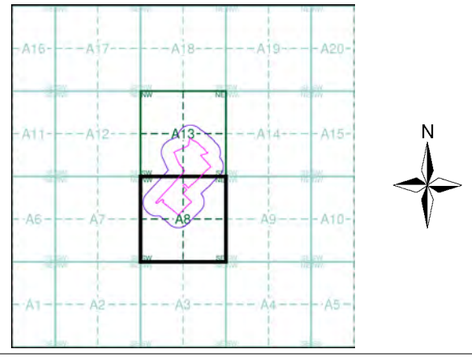

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1977 - 1988

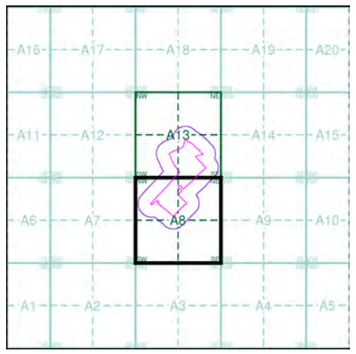

Source map scale - 1:2,500

The SIM cards (Ordnance Survey's `Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1995

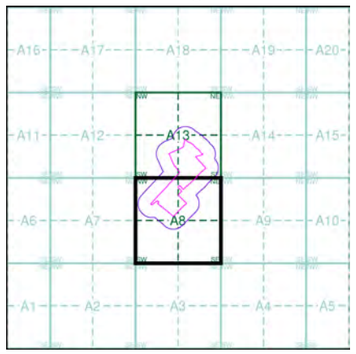

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Subject: RE: PROPOSED DEVELOPMENT: LAND AT STORRIDGE ROAD, WESTBURY, BA13 4HH

6089(5·1.

Dear Karen

Further to your email below and pending payment I have looked at the records we hold with regard to the site outlined below in yellow

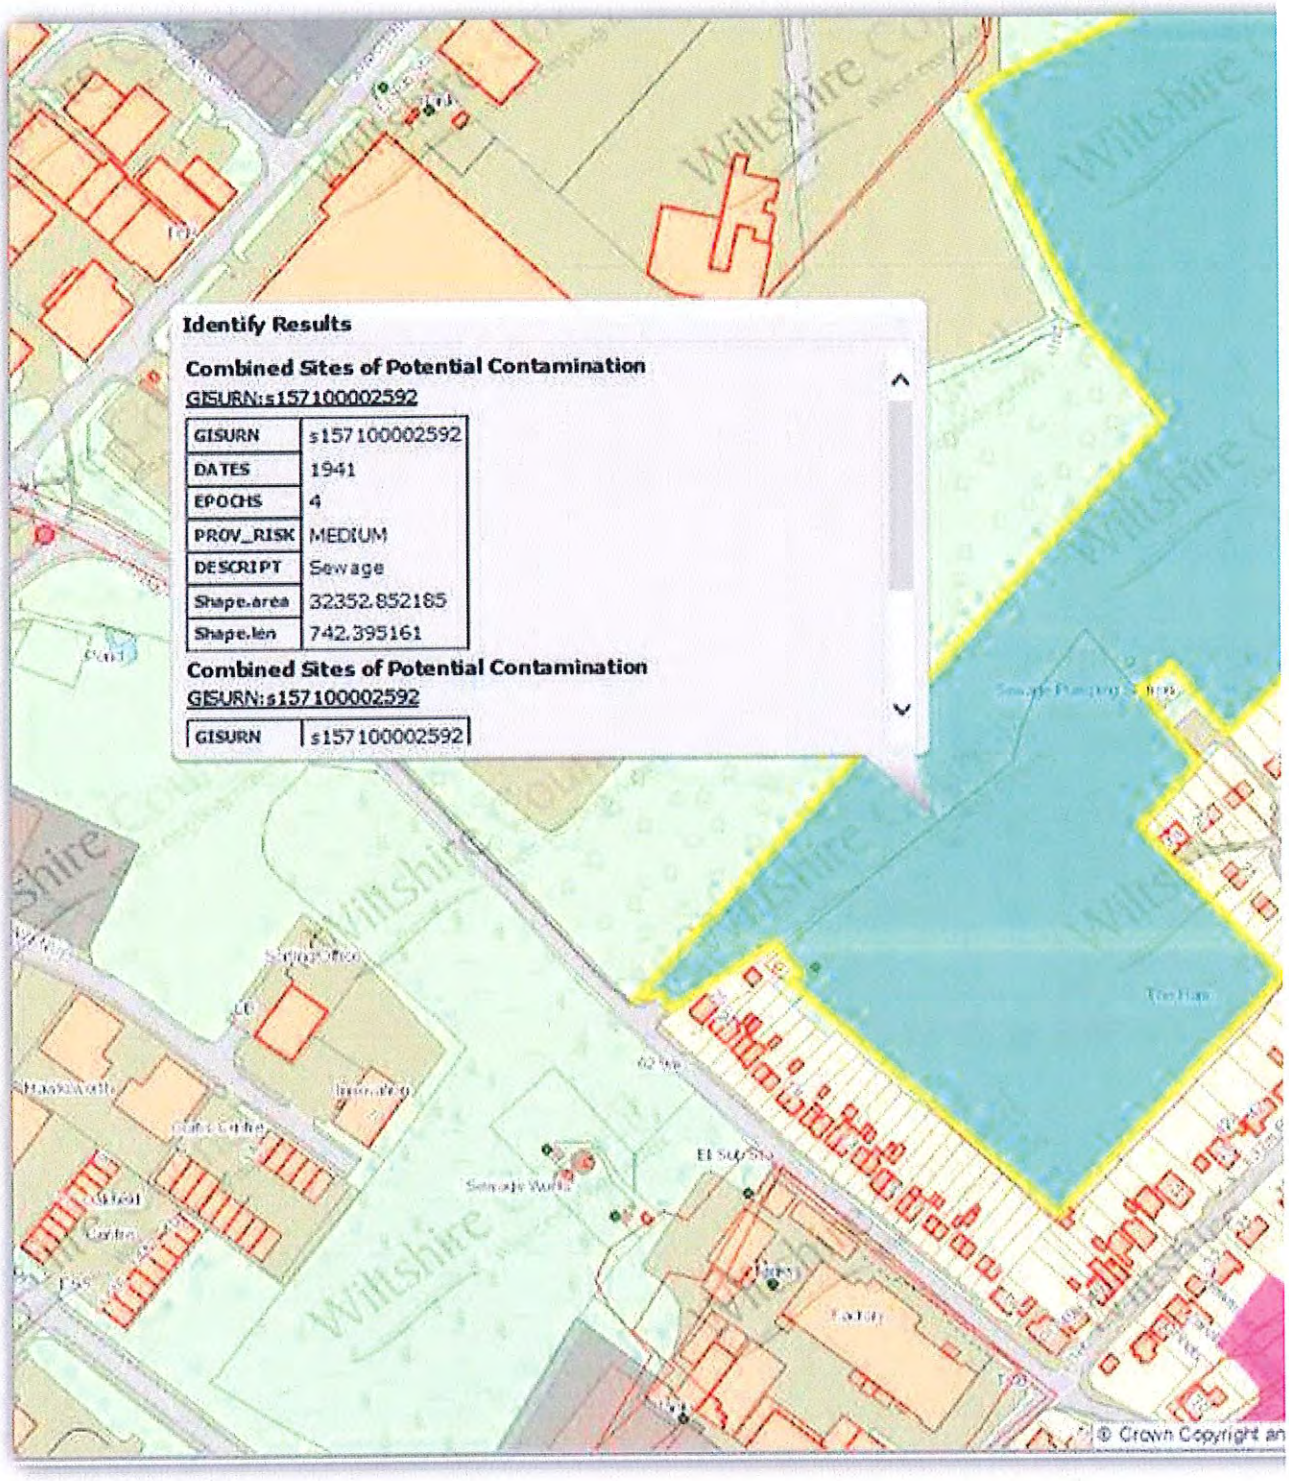

In terms of your questions I can confirm the following:

1. Known pollution incidents which may have affected the site.

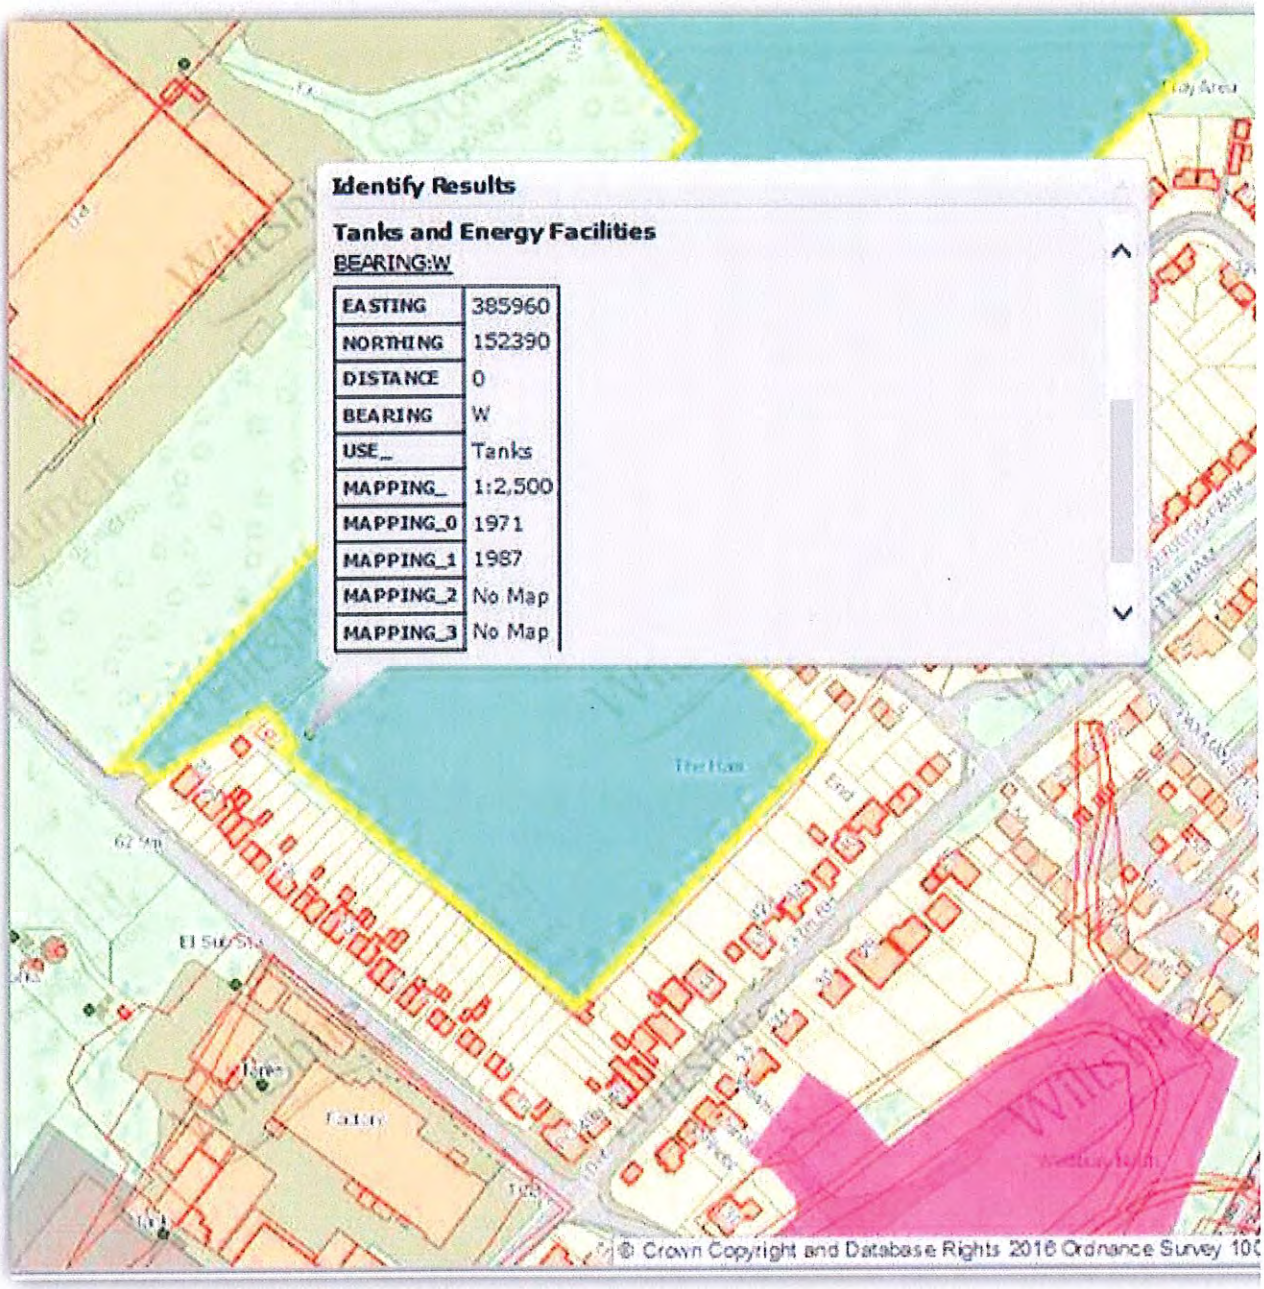

Public Protection records do not indicate any pollution incidents to have affected the subject site.

2. Contaminative activities at the site.

In the south of the site a former sewage works is indicated and a current sewage pumping station (please refer mapping below)

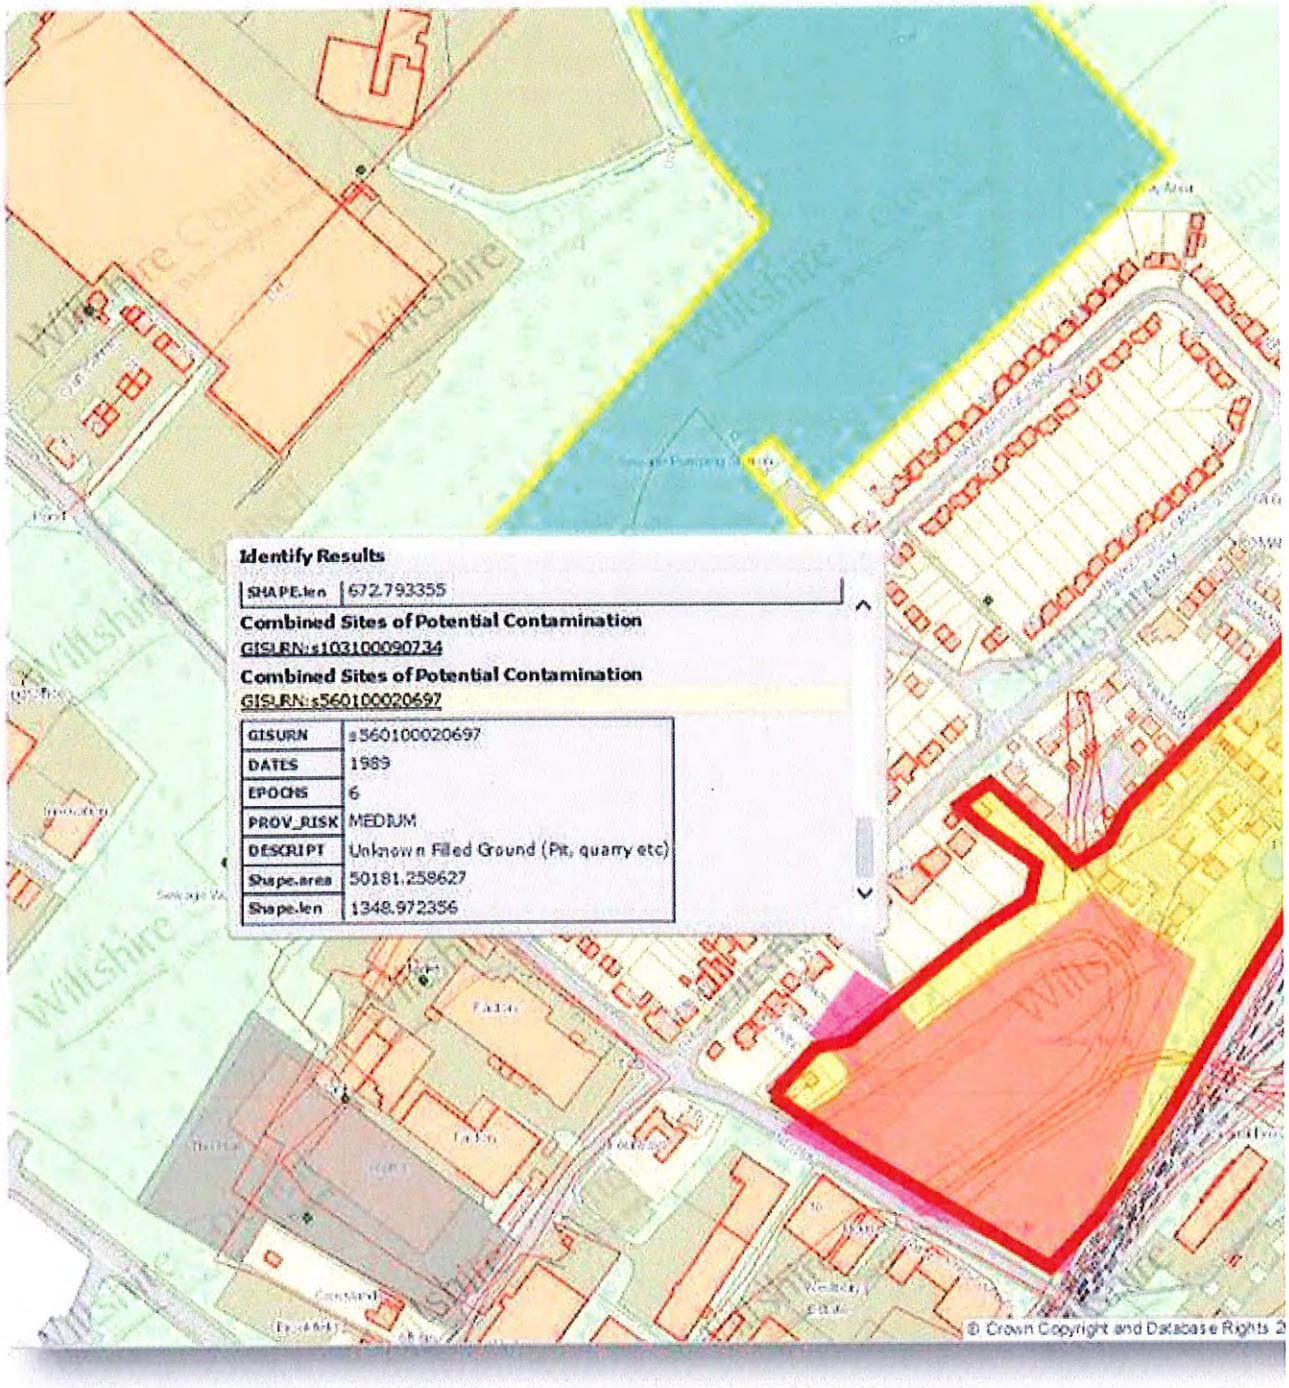

Tanks or energy facilities are also identified in the south western corner of the site (see mapping below). These are indicated by a green point.

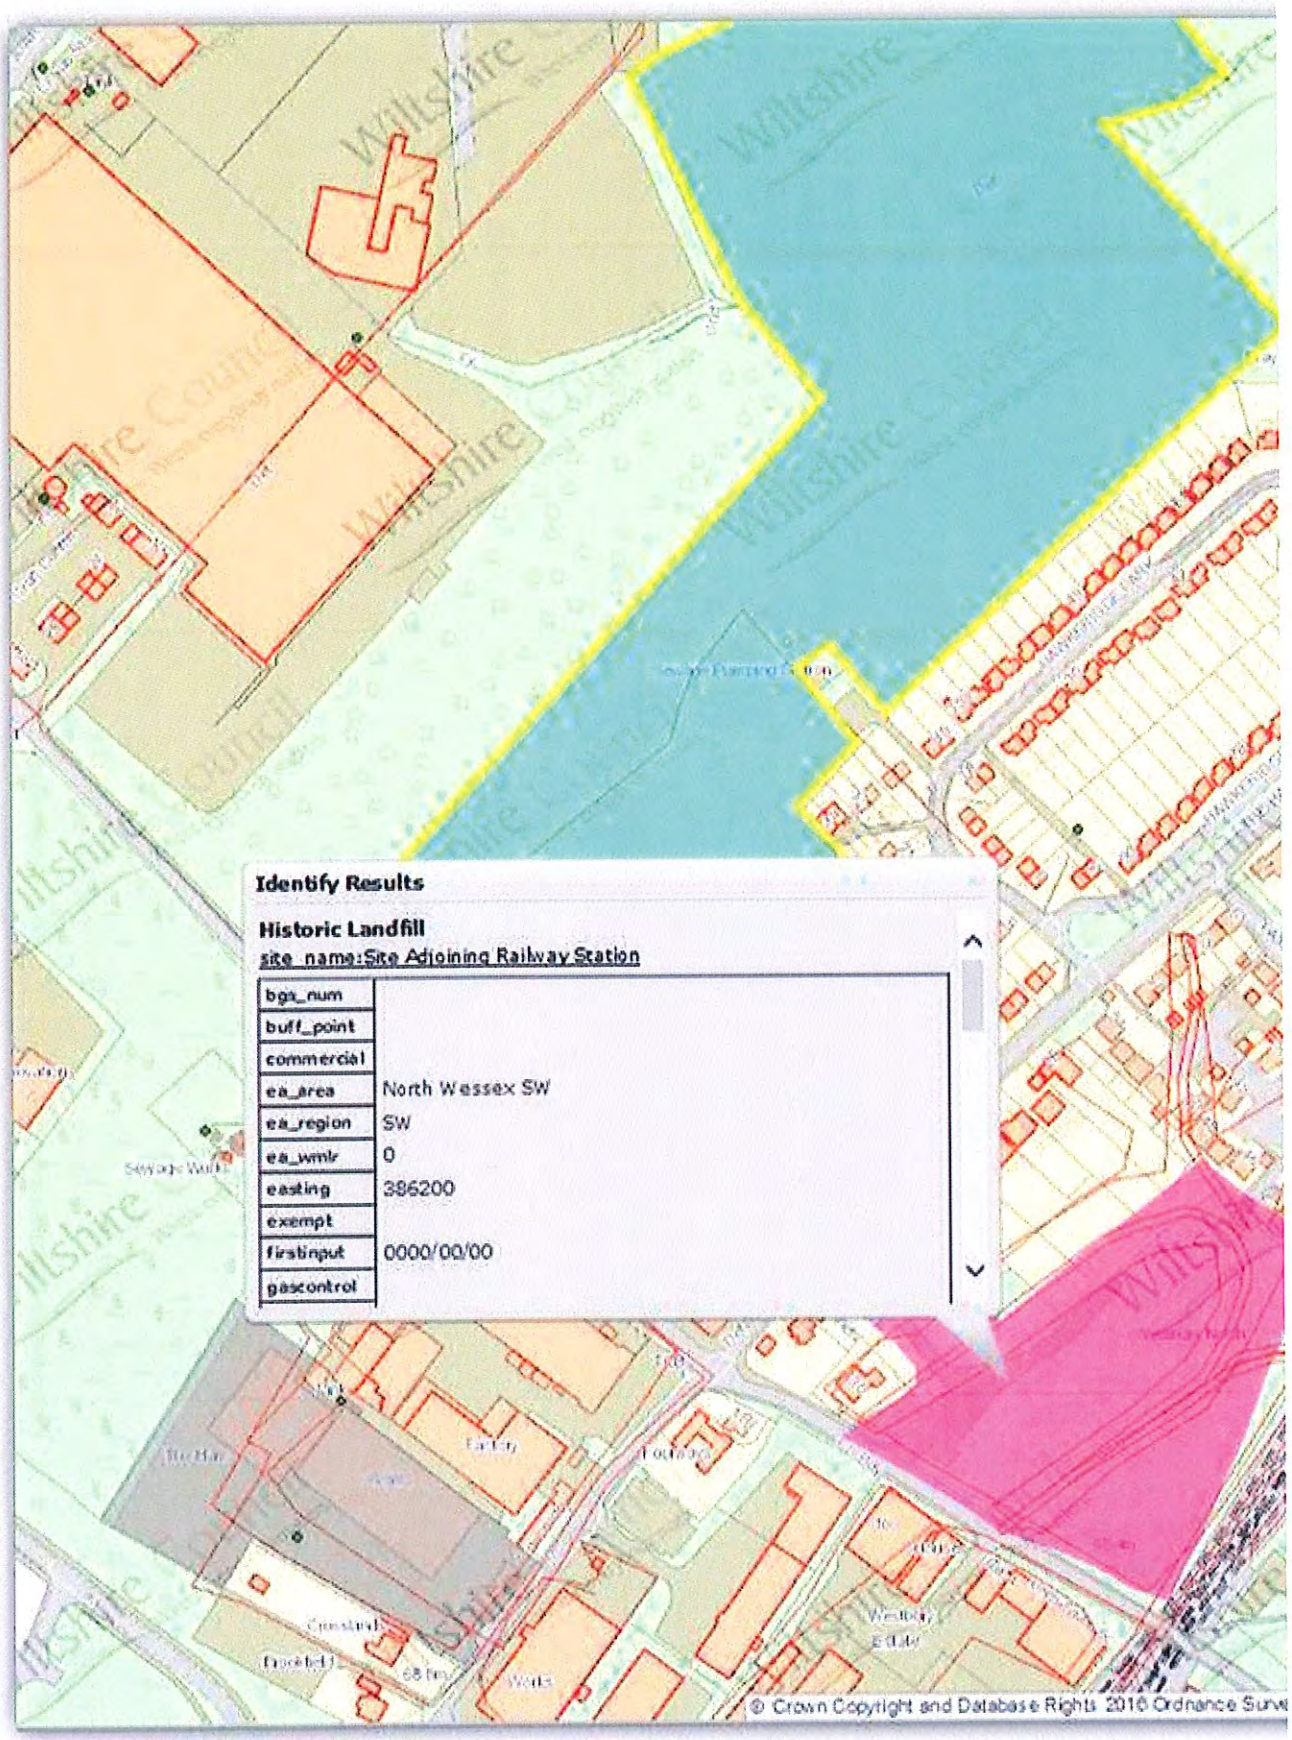

3. Pre-licensing or unlicensed landfilling activities within a 500m radius of the site, including landfill location, depth, presence of lining system, age and type of waste deposits.

A parcel of unknown filled ground is indicated within 100m of the subject site (see mapping below). No details of the infilling materials are recorded.

Subsequently within the southwest corner of the above polygon there is a recorded unlicensed landfill in the Environmental Agency record (shown as pink polygon on mapping below). No details of infilled materials are given for this site. Its reference is EAHLD09714 and the site last received waste 31/12/1984. No details of site construction are present.

4. Results of any landfill gas and leachate monitoring.

Public Protection do not hold any records of gas or leachate monitoring for any of the above sites.

Informative.
This information is provided after appropriate enquiries and represents a summary of the information available to this department at the time of the enquiry. It is provided on the understanding that the council does not guarantee its accuracy. Neither the council, any officer or agent is legally responsible for any discrepancy, error or omission; whether arising from inaccuracy, negligence or any other cause whatsoever.

If I can be of any further assistance please do not hesitate to contact me.

Kind Regards

Steve Manning

Subject: PROPOSED DEVELOPMENT: LAND AT STORRIDGE ROAD, WESTBURY, BA13 4HH

We are currently undertaking an appraisal and desk study of the land highlighted on the attached plan for development and would appreciate any information you are able to provide on the following:

1. Known pollution incidents which may have affected the site.

2. Contaminative activities at the site.

3. Pre-licensing or unlicensed landfilling activities within a 500m radius of the site, including landfill location, depth, presence of lining system, age and type of waste deposits.
