

Thank you for forwarding on the ecology objection. I respond to the comments as follows:

Nutrient Neutrality

The proposed PTP is a Graf One2Clean and I attach the PIA certificate as requested. The nutrient budget shows that following installation of a GRAF One2Clean package treatment plant (80.2% phosphorus removal efficiency), the development will result in a residual phosphorus load requiring mitigation of 0.22 kg TP/year. This PTP is non chemical dosing and therefore meets with the requirements.

Using Wiltshire Council's published rate of £42,500 per kg phosphorus, plus a 5% administration fee, the mitigation cost is:

- Mitigation cost: $0.22 \text{ kg} \times £42,500 = £9,350$
- Admin fee (5%): £467.50
- Total contribution: £9,817.50

I understand that a Unilateral Undertaking will be required to secure this contribution to the Council's strategic phosphorus mitigation scheme. The following documents are enclosed in order to assist the Council's legal team in preparing this. Alternatively, please provide me with a template for the UU and this can be drafted and issued separately.
