

Wiltshire Council Planning Consultation Response

ECOLOGY

Officer name:	Jessica Cracknell
Date:	10/07/2026
Application Number:	PL/2026/02541
Proposal:	Single Storey Side and Rear Extension
Site Address:	Sandyrood, Giles Lane, Landford, Salisbury, SP5 2BG
Case Officer:	Kate Clements

Recommendations:

☐	No Comment
☐	Support
☐	No objection
☒	Condition (no objection subject to conditions)
☐	Objection - further information required
☐	Objection in principle
☒	HRA.

Thank you for your consultation on the above application. I have reviewed the submitted documents against OS maps, aerial photographs of the site and surrounding area, together with GIS layers of statutory and non-statutory designated sites and existing records of protected species.

The following submitted documentation was reviewed to inform this response:

- Preliminary Roost Assessment. 06 June 2026. Vesper Conservation & Ecology Limited;
- Proposed Site Layout. Austin Design Partnership. ADP/2610/P/05;
- Site Identification Plans. Austin Design Partnership. ADP/2610/P/00;
- Proposed Elevations. 08 June 2026. Austin Design Partnership. ADP/2610/P/04A;
- Existing Elevations. Austin Design Partnership. ADP/2610/P/02.

New Forest Protected Sites

The proposed development site lies within the 13.8km zone of influence for the New Forest internationally protected sites, which comprises the New Forest SPA, New Forest SAC and New Forest Ramsar site. Therefore, the application is screened into appropriate assessment under the Conservation of Habitats and Species Regulations 2017 (as amended) on account of its potential to cause adverse effects on the New Forest protected sites through increased recreational pressure which may occur alone and in-combination with other plans and projects.

A test of likely significance has been carried out by the relevant Competent Authority (Wiltshire Council). This concluded that given the nature of the development and the absence of any increase in overnight accommodation, there would be no recreational impact on the New Forest, therefore there is no mechanism for adverse effect. The Habitat Regulation Assessment (HRA) has concluded that the application is not likely to have significant impacts on the New Forest SPA, New Forest SAC and New Forest Ramsar site and the proposal is screened out of Appropriate Assessment.

River Test Catchment

Solent Maritime Special Area of Conservation (SAC), Chichester and Langstone Harbours Special Protection Area (SPA) and Ramsar site, Portsmouth Harbour SPA and Ramsar site, Solent and Southampton Water SPA and Ramsar site.

This development falls within the catchment of the River Test which drains into the Solent Protected Sites and has potential to cause adverse effects alone or in combination with other developments through discharge of nitrogen in wastewater. Appropriate Assessment must be carried out by the relevant Competent Authority (the LPA) to determine the potential significant effects and the suitability of any measures proposed to avoid or mitigate those effects.

A test of likely significance has been conducted by the relevant Competent Authority (Wiltshire Council). This assessment determined that, due to the nature of the development, with no increase in dwelling and the lack of any increase in water supply, drainage installation within this development, there will be no mechanism for effect on the River Test catchment. The Habitat Regulation Assessment (HRA) has concluded that the application is not likely to have significant impacts on the River Test Catchment and the proposal is screened out of Appropriate Assessment.

Habitat Regulations Assessment (HRA): Mottisfont Bats Special Area of Conservation (SAC)

The application site is within a consultation zone for Barbastelle bats associated with the Mottisfont Bats Special Area of Conservation (SAC) and therefore has potential to result in significant adverse impact on the special features of that site. Appropriate Assessment (AA) under Section 63 of the Conservation of Habitats and Species Regulations 2017 (as amended) must be carried out by the relevant Competent Authority (the LPA) to determine the potential significant effects and the suitability of any measures proposed to avoid or mitigate those effects.

The Preliminary Roost Assessment identified the existing building as having negligible potential to support roosting bats. The site is assessed to offering suitability for foraging and commuting bats. The single storey side and rear extensions will not require the removal of vegetation considered to be functionally valuable for foraging or commuting bats. Subject to retention of key boundary features and implementation of a sensitive lighting strategy, it is likely that the functionality of the habitats within the site and their availability to bats will not be adversely affected. Should the proposals change such that trees or existing features with potential roosting features are affected, further survey work would be required and mitigation measures would need to be reviewed and updated accordingly.

A test of likely significance has been carried out by the relevant Competent Authority (Wiltshire Council) as required by Regulation 63 Conservation of Habitats and Species (Amendment) (EU Exit) Regulations 2019. This concluded that given the scale and nature of the development there is no mechanism for adverse effect/any temporary construction impacts and operational impacts would be de-minimus. The Habitat Regulation Assessment (HRA) has concluded that the application will not result in any mechanism for adverse effect on local bat populations, or on the conservation objectives of the SAC and subsequently is screened out of Appropriate Assessment.

The habitat within the proposed development site and the surrounding area is suitable for roosting, foraging and commuting bats. An increase in artificial lux levels can deter bats which could result in roost abandonment and/or the severance of key foraging areas. This will likely result in a significant negative impact upon the health of bat populations across the region. Artificial light at night can have a substantial adverse effect on biodiversity. Any new lighting should be for the purposes for safe access and security and be in accordance with the appropriate Environmental Zone standards set out by the Institute of Lighting Engineers in their publication GN01:2021, 'Guidance for the Reduction of Obtrusive Light' (ILP, 2021), and Guidance note GN08/23 "Bats and artificial lighting at night", issued by the Bat Conservation Trust and Institution of Lighting Professionals. Suitable lighting to ensure dark foraging and commuting routes can be retained could be secured via condition.

Biodiversity Net Gain

From 12 February 2024 Biodiversity Net Gain (BNG) became mandatory under Schedule 7A of the Town and Country Planning Act 1990 (as inserted by Schedule 14 of the Environment Act 2021). Based on the information available the biodiversity gain planning condition is not considered to apply to this application as the application is for development which is subject of a householder application within the meaning of article 2(1) of the Town and Country Planning (Development Management Procedure) (England) Order 2015.

Note to case officer: you should be satisfied that the proposals meet the above criteria and act accordingly. Further information will be required from the applicant prior to determination in the event the application is considered to be subject to mandatory biodiversity net gain.

Core Policy 50

Core Policy 50 of the Wiltshire Core Strategy requires all development to demonstrate no net loss of biodiversity and to seek opportunities to enhance biodiversity. The NPPF also encourages applications to deliver measurable net gains (para 186 d). It is anticipated that all developments will deliver no net loss of biodiversity. For this application, biodiversity measures should focus on delivering continued ecological functionality for birds, bats and hedgehogs.

The Preliminary Roost Assessment recommends the inclusion of a bird box and bat box. All details on exact locations and specifications must be added to all working plans (Proposed Elevations. 08 June 2026. Austin Design Partnership. ADP/2610/P/04A) and will become an enforceable part of the planning permission to avoid oversight and to ensure consistency and enforceability. Integrated features are generally maintenance-free and seek to benefit a target species/s or group/s and should demonstrate viability in terms of position on the building, location and clustering in accordance with relevant guidance and the additional features. Bird/bat boxes will continue to be available for birds/bats for the lifetime of the development.

CONDITIONS:

1. Compliance with submitted documents

The development will be carried out in strict accordance with the following documents:

- Preliminary Roost Assessment. 06 June 2026. Vesper Conservation & Ecology Limited;
- Proposed Elevations. 08 June 2026. Austin Design Partnership. ADP/2610/P/04A.

REASON: For the avoidance of doubt and for the protection, mitigation and enhancement of biodiversity.

2. Lighting

No external light fixture or fitting will be installed within the application site unless details of existing and proposed new lighting have been submitted to and approved by the Local Planning Authority in writing. The submitted details will demonstrate how the proposed lighting will impact on bat habitat compared to the existing situation.

The plans will be in accordance with the appropriate Environmental Zone standards set out by the Institution of Lighting Professionals (ILP) Guidance Notes on the Avoidance of Obtrusive Light (GN 01/2021) and Guidance note GN08/23 "Bats and artificial lighting at night", issued by the Bat Conservation Trust and Institution of Lighting Professionals.

REASON: To avoid illumination of habitat used by bats.

Final sign off – all matters addressed:
