15%	12	No.	Corylus avellana	B Trans	60-80cm	
20%	15	No.	Cornus sanguinea	B Trans	60-80cm	
10%	8	No.	Sambucus nigra	B Trans	60-80cm	
Individual varieties to be planted in groups of approximately 5-10.						
NOTES AND ABBREVIATIONS						
B = Bare root (bagged).						
C = Container (or pot) grown, followed by size of the container (or pot).						
SIZE = Height or Spread of juvenile plant.						
STOCK = Root condition/protection method eg Bare root.						
Trans = Transplant (or undercut seedling).						
- Refer to specification for further information.						
- All plants to be completely hardened off						
- Substitutions to be agreed with Landscape Architect.						
Plant Schedule generated by "Qscape" software 31/05/2026						

PLANTING PREPARATION NOTES:

The following notes set out the principles and minimum standard required for the implementation of all soft landscaping as part of this development.

This planting plan has been specified based on installation being carried out during the planting season (November to March inclusive). If the scheme is to be delivered outside of the planting season, all Bareroot (BR) and Rootball (RB) stock is to be uplifted to container grown plants.

Site Preparation

- For shrub planting, the pits should be excavated to a depth of 450mm

Topsoil

- All excavated areas are to be backfilled with imported topsoil or site won topsoil.
- All imported topsoil must be in accordance with BS3882:2015.
- It is recommended that site won topsoil should be test in accordance with BS3882:2015 Annex E for suitability for intended use.
- Soil samples to be submitted to the client for review.
- If the topsoil is not compliant, a soil specialist should be consulted to review whether the soil condition can be improved.

Subsoil

- British Standards: To be in accordance with BS8601:2023

Planting

- All proposed species should reflect those indicated on the landscape plans. They should be true to type and be supplied in line with HTA 'National Plant Specification'.
- All planting to be handled, stored, transported and planting in accordance with HTA 'Handling and establishing landscape plants' guidance.
- All plant species are to be watered ahead of installation.
- The planting should be installed at the densities indicated in the plant schedule and in accordance with the layout.
- For planting mixes that are proposed in a single area (i.e. native scrub mix), they are to be set out in a random matrix.
- Any plant substitutions should be agreed with the project Landscape Architect prior to implementation.
- All bareroot stock is to be planted during the planting season (November to March)
- Bareroot stock to incorporate biodegradable spiral guards and single cane for protection until establishing.
- Shrubs and transplants to comply with National Plant Specification.
 - Shrub pit size: 300 x 300 x 200mm depth
 - Backfill with 3 litres of peat free tree and shrub compost
- Specimen plant pit size: 400 x 400 x 250mm depth
 - Backfill with 5 litres of peat free tree and shrub compost

Herbicides

- Apply herbicide to topsoil ahead of planting where required.
- Application of herbicide to be in accordance with Control of Pesticides Regulations 1986.
- To be applied by qualified member of staff that are used to controlling such products, and in line with manufacturers instructions.
- Spot treat planting areas during the maintenance period where necessary in line with the manufacturers guidance.

Mulching layer

- All shrubs are to receive 75mm depth medium grade bark mulch.

Turf

- Carry out the ground preparation prior to turf being delivered to site.
- Remove existing vegetation and large objects.
- Rotavate the soil before layer the turf if the ground appears compacted.
- Rake lightly the area, compact and water so the soil is moist before installing the turf.
- Spread 150mm depth of topsoil over the area to be turfed.
- Turf should be laid immediately to prevent drying out.
- Stagger the joints between each piece of turf.
- Water the newly turfed areas daily for approximately 2-3 weeks after implementation to give the best chance of establishing.

Implementation Programme

- The ideal time to undertake planting is within the planting season during the months of November to March (inclusive). This is the period when the plants are dormant with bareroot and rootball stock readily available.
- Should the construction programme not allow for this, planting must be carried out at the earliest opportunity during the next planting season.

Watering

- It is imperative that the plants are installed into moist soil and are watered thoroughly after planting. A regular watering regime is important during the establishment period, particularly during the summer months to give the plants the best chance of establishing.
- The plants are to be watered regularly through the spring to summer months for the first 2 years to give them the best chance of establishing.

NOTES:

Please do not scale from this drawing, either paper or electronic copies.

All final measurements must be checked on site by the contractor.

If there are any discrepancies noted in relation to dimensions or scale, please notify the Landscape Architect.

All works are to be carried out in accordance with the latest British Standards and/ or Codes of Practice unless otherwise stated.
