

Wiltshire Council Planning Consultation Response

ECOLOGY

Officer name:	Jessica Cracknell
Date:	20/07/2026
Application Number:	PL/2026/01615
Proposal:	Single storey side extension and associated works.
Site Address:	38 Broadstones, Monkton Farleigh, Bradford On Avon, BA15 2QA
Case Officer:	Steven Vellance

Recommendations:

☐	No Comment
☐	Support
☐	No objection
☒	Condition (no objection subject to conditions)
☐	Objection - further information required
☐	Objection in principle
☒	HRA.

Thank you for your consultation on the above application. I have reviewed the submitted documents against OS maps, aerial photographs of the site and surrounding area, together with GIS layers of statutory and non-statutory designated sites and existing records of protected species.

The following submitted documentation was reviewed to inform this response:

- Preliminary Roost Assessment. 18 May 2026. Abricon Limited. Project No. 001SBEL026. Version. 1.0;
- Proposed Site Plan. We Are Not Architects. Project Ref. 2025100. Drawing No. 102B;
- Proposed Elevations. We Are Not Architects. Project Ref. 2025100. Drawing No. 110;
- Existing Site Plan. We Are Not Architects. Project Ref. 2025100. Drawing No. 102A;
- Proposed Elevations. We Are Not Architects. Project Ref. 2025100. Drawing No. 108.

Bath and Bradford on Avon Bat Special Area of Conservation (SAC): Habitat Regulations Assessment (HRA)

The application site is located within a consultation zone for Bechstein's bats, Greater Horseshoe bats and Lesser Horseshoe bats associated with the Bath and Bradford on Avon Bats Special Area of Conservation (SAC) and therefore has potential to result in significant adverse impact on the special features of that site. Appropriate Assessment (AA) under Section 63 of the Conservation of Habitats and Species Regulations 2017 (as amended) must be carried out by the relevant Competent Authority (the LPA) to determine the potential significant effects and the suitability of any measures proposed to avoid or mitigate those effects.

The Preliminary Roost Assessment identified the existing buildings as having low to negligible potential to support roosting bats. The site is assessed to offering suitability for foraging and commuting bats. The single storey side extension and associated works will not require the removal of vegetation considered to be functionally valuable for foraging or commuting bats. Subject to retention of key boundary features and implementation of a sensitive lighting strategy, it is likely that the functionality of the habitats within the site and their availability to bats will not be adversely affected. Should the proposals change such that trees or existing features with potential roosting features are affected, further survey work would be required and mitigation measures would need to be reviewed and updated accordingly.

A test of likely significance has been carried out by the relevant Competent Authority (Wiltshire Council) as required by Regulation 63 Conservation of Habitats and Species (Amendment) (EU Exit) Regulations 2019. This concluded that given the scale and nature of the development there is no mechanism for adverse effect. The Habitat Regulation Assessment (HRA) has concluded that the application will not result in any mechanism for adverse effect on Annex II bats, or on the conservation objectives of the SAC and subsequently is screened out of Appropriate Assessment.

The habitat within the proposed development site and the surrounding area is suitable for roosting, foraging and commuting bats. An increase in artificial lux levels can deter bats which could result in roost abandonment and/or the severance of key foraging areas. This will likely result in a significant negative impact upon the health of bat populations across the region. Artificial light at night can have a substantial adverse effect on biodiversity. Any new lighting should be for the purposes for safe access and security and be in accordance with the appropriate Environmental Zone standards set out by the Institute of Lighting Engineers in their publication GN01:2021, 'Guidance for the Reduction of Obtrusive Light' (ILP, 2021), and Guidance note GN08/23 "Bats and artificial lighting at night", issued by the Bat Conservation Trust and Institution of Lighting Professionals. Suitable lighting to ensure dark foraging and commuting routes can be retained could be secured via condition.

Nesting Birds

Where possible, vegetation removal should be scheduled outside the bird breeding season (1st March–31st August) to avoid potential disturbance. If removal during this period is unavoidable, a pre-works nesting bird inspection must be conducted no more than two weeks before tree felling begins. The applicant is advised to check any structure or vegetation capable of supporting breeding birds and delay removing or altering such features until after young birds have fledged. Damage to extensive areas that could contain nests/breeding birds should be undertaken outside the breeding season.

Biodiversity Net Gain

From 12 February 2024 Biodiversity Net Gain (BNG) became mandatory under Schedule 7A of the Town and Country Planning Act 1990 (as inserted by Schedule 14 of the Environment Act 2021). Based on the information available the biodiversity gain planning condition is not considered to apply to this application as the application is for development which is subject of a householder application within the meaning of article 2(1) of the Town and Country Planning (Development Management Procedure) (England) Order 2015.

Note to case officer: you should be satisfied that the proposals meet the above criteria and act accordingly. Further information will be required from the applicant prior to determination in the event the application is considered to be subject to mandatory biodiversity net gain.

Core Policy 50

Core Policy 50 of the Wiltshire Core Strategy requires all development to demonstrate no net loss of biodiversity and to seek opportunities to enhance biodiversity. The NPPF also encourages applications to deliver measurable net gains (para 186 d). It is anticipated that all developments will deliver no net loss of biodiversity. To provide increased opportunities for biodiversity/fauna/animals it is expected that new developments will provide integral features to benefit biodiversity such as for birds, bats and hedgehogs.

Ecological Enhancements within section 5.4 of the Preliminary Roost Assessment are provided through the installation of a bat and bird box. All details on exact locations and specifications must be added to all working plans (Appendix D – Enhancement Plan. Preliminary Roost Assessment. 18 May 2026. Abricon Limited. Project No. 001SBEL026. Version. 1.0) and will become an enforceable part of the planning permission to avoid oversight and to ensure consistency and enforceability. Integrated features are generally maintenance-free and seek to benefit a target species/s or group/s and should demonstrate viability in terms of position on the building, location and clustering in accordance with relevant guidance and the additional features.

CONDITIONS:

1. Compliance with submitted documents

The development will be carried out in strict accordance with the following documents:

- Sections 4 and 5 and Appendix D of the Preliminary Roost Assessment. 18 May 2026. Abricon Limited. Project No. 001SBEL026. Version. 1.0.

REASON: For the avoidance of doubt and for the protection, mitigation and enhancement of biodiversity.

2. Lighting

No external light fixture or fitting will be installed within the application site unless details of existing and proposed new lighting have been submitted to and approved by the Local Planning Authority in writing. The submitted details will demonstrate how the proposed lighting will impact on bat habitat compared to the existing situation.

The plans will be in accordance with the appropriate Environmental Zone standards set out by the Institution of Lighting Professionals (ILP) Guidance Notes on the Avoidance of Obtrusive Light (GN 01/2021) and Guidance note GN08/23 "Bats and artificial lighting at night", issued by the Bat Conservation Trust and Institution of Lighting Professionals.

REASON: To avoid illumination of habitat used by bats.

INFORMATIVES:

Bat Species

There is a low risk that bats may occur at the development site. Many species of bat depend on buildings for roosting, with each having its own preferred type of roost. Most species roost in crevices such as under ridge tiles, behind roofing felt or in cavity walls and are therefore not often seen in the roof space. Bat roosts are protected all times by the Conservation of Habitats and Species 2017 (as amended) even when bats are temporarily absent because, being creatures of habit, they usually return to the same roost site every year. Planning permission for development does not provide a defence against prosecution under this legislation or substitute for the need to obtain a bat licence if an offence is likely. If bats or evidence of bats is found during the works, the applicant is advised to stop work and follow advice from an independent ecologist or the applicant is advised to follow the advice of a professional ecologist or to contact Natural England's Batline through the internet.

Nesting Birds

All British birds, their nests and eggs are protected under Section 1 of the Wildlife and Countryside Act 1981 (as amended) and the Countryside and Rights of Way Act 2000 while birds are nesting, building nests and sitting on eggs. The applicant is advised to check any structure or vegetation capable of supporting breeding birds and delay removing or altering such features until after young birds have fledged. Damage to extensive areas that could contain nests/breeding birds should be undertaken outside the breeding season. This season is usually taken to be the period between 1st March and 31st August but some species are known to breed outside these limits.

Final sign off – all matters addressed:
