Dear Kate,

Please see response below and attached from The Ecology Co-Op.

Hi Andy,

The BSG technical note, makes Natural England's Metric Team's position quite clear.

Wiltshire Ecology Department suggest they haven't seen condition assessments or botanical data - the experts letter classifies the grassland under **UKHab** and reports on its condition. The photo clearly confirms both of these. I have attached the raw data relating to the grassland for Wiltshire's ecologist to review. By providing this data we have essentially provided everything that one would require when submitting BNG documentation for a non-exempt scheme, save the metric itself!

Kind regards,

Owen Crawshaw
