Poor

Condition Criteria Assessment for Grasslandhigh

A. The grassland is a good representation of the habitat type it has been identified as, based on its UKHab description - the appearance and composition of the vegetation closely matches the characteristics of the specific grassland habitat type. Indicator species listed by UKHab for the specific grassland habitat type are consistently present.

FALSE

Notes

Edit

B. Sward height is varied (at least 20% of the sward is less than 7 cm and at least 20 per cent is more than 7 cm) creating microclimates which provide opportunities for insects, birds and small mammals to live and breed.

FALSE

Notes

Edit

C. Cover of bare ground between 1% and 5%, including localised areas, for example, rabbit warrens.

TRUE

Notes

Edit

D. Cover of bracken Pteridium aquilinum less than 20% and cover of scrub (including bramble Rubus fruticosus agg) less than 5%.

TRUE

Notes

Edit

E. Combined cover of species indicative of sub-optimal condition and physical damage (such as excessive poaching, damage from machinery use or storage, damaging levels of access, or any other damaging management activities) accounts for less than 5% of total area.

TRUE

Notes

Edit

F. There are 10 or more vascular plant species per m2 present, including forbs that are characteristic of the habitat type (species referenced in criterion 5 above cannot contribute towards this count).

FALSE

Notes

Edit

13 species recorded
