Subject: RE: Unit 2, Churchill Way West - PL/2026/03167 & PL/2026/03171

Hi Joe

I write in respect of application **PL/2026/03487**.

In response to the EHO comments, I can confirm that the submitted drawings are correct and accurate, but that the noise report had not been completed with the right plant units – apologies for the error.

This has now been corrected and the revised assessment attached provided. This demonstrates that the proposed operation of the plant will continue to be within the Council's Sound Criteria and will not impact on amenity of receptors within the area.

To confirm the proposed plant scheme as shown on the drawings and updated noise report is as follows:

- 4no. Mitsubishi PUZ-M250YKA condensing units; and
- 1no. QAHV-N560YA-HPB air source heat pump; and
- 1no. Swegon Gold RX AHU unit.

I trust that this addresses this matter and enables the EHO to respond fully now on this application.

If you have any questions, or need anything further, please let me know.

Kind Regards

Matt
