

**Incorporation of Bat Roosting**

One integrated bat box such as Schwegler 1FR located at eaves level on the South or East facing elevation, not directly above a window. Another bat box such as Schwegler Bat Box 2F should be pole mounted if no suitable trees are present. This should be a minimum of 4 metres above the ground, away from artificial light sources in a position sheltered from wind but ideally South/South-east or South-west so it is exposed/warmed by the sun for part of the day and should be in position **before** any commencement of works.
