

B1.6 - Environmental Management Techniques

The Environmental Management System includes the following procedures:

- The director / manager of the site is responsible for environmental compliance and ensuring all permit conditions are met.
- All employees will receive training in environmental awareness, correct use of paints and solvents, spill response procedures, waste segregation and operation of the spray booth.
- Spray booth extraction systems, filters, compressors and associated equipment are inspected, serviced and maintained in accordance with the manufacturer's recommendations, with maintenance records retained.
- Spray booth filters are checked routinely and replaced when required to maintain effective control of paint particulate emissions.
- Paints, thinners, solvents and hazardous substances are stored in clearly labelled, sealed containers within designated storage areas to minimise the risk of spills and emissions.
- Any spillages are immediately contained, cleaned up and disposed of as hazardous waste where appropriate.
- Hazardous and non-hazardous wastes are segregated, securely stored and removed by licensed waste contractors.
- Routine inspections of the site are undertaken to identify any potential environmental issues, with corrective actions recorded and implemented where necessary.
