

TREE WORK APPLICATION - 38 WINSLEY VILLAGE –26.09.2026
ref number PP- 15252336

Application to cut down 1 Scots Pine and 1 Silver Birch Tree.

These trees were planted by the previous owner in groups with other trees along a stone wall. The wall runs along a single-track lane used by residents, walkers, runners, the public and families accessing the Village Hall, Winsley Cricket Club and Winsley Bowls Club.

Our concern is that the eventual root system will undermine the foundations of the wall, disrupt the surface of the public road on the other side of the wall and the eventual height will affect the light to the garden and poses a risk to the wall and the lane on the other side of the wall. They are in competition with other smaller trees planted alongside them. A Rowan tree has already shown signs of drought stress during this summer.

Their position and eventual size are unsuitable to the small walled garden and we wish to preserve the smaller trees and prevent future damage to the wall and public road from the larger trees.

The Scots Pine tree is 1 metre from a smaller Juniper tree and 1.3m from a smaller ?Northern White Cedar. It is 1 metre from the wall.

The Silver Birch tree is 1.4m from a smaller Malus tree, 1.4m from a smaller Cotoneaster tree which is 1.4m from a smaller Rowan tree. It is 0.4m from the wall.
