

Paul Bevan statement

We are a long standing family run haulage contractor and are currently in our 4th generation as a business and are certainly at the top of our field in our sector with large vehicle mounted cranes , working for the largest tier 1 construction companies in the country We wish to upgrade our facilities into modern day welfare and working conditions for all staff. Since approximately 2018 we have outsourced our maintenance for our vehicles due to inadequate buildings that does not take the size of the modern day vehicle, as you are all aware vehicles were smaller cars and trucks alike years ago. This outsourcing puts extreme financial pressure on our business and will not be sustainable if we continue this method, so we are looking to build a new office /workshop facility to bring everything in line with modern day standards and expectations. We are not looking to expand our fleet at all ,but purely take back control and have our own inhouse maintenance team the cover all of our needs, we would look take on 1 or 2 new employees to cover these works. The upgrade would massively improve the health and safety of all staff with much better visibility for the turning vehicles that manoeuvre daily. Bringing the maintenance back inhouse would actually reduce the number of movements between 10/20 per week. I must stress there is no desire to expand fleet size.
